**From Mathematics to Generic Programming** Alexander A. Stepanov, Daniel E. Rose, 2014 This book is a great introduction to the core principles of generic programming for the experienced programmer The authors work through examples showing how to analyze the requirements of an algorithm and make it as general as possible The book includes several programming laws of particular interest to those building software components The authors show how programmers can become more effective by learning about the idea of abstraction and the math it relies on In an engaging and accessible fashion they describe how these mathematical results were first discovered and are surprisingly useful in programming

Fundamental Proof Methods in Computer Science Konstantine Arkoudas, David Musser, 2017-04-28 A textbook that teaches students to read and write proofs using Athena Proof is the primary vehicle for knowledge generation in mathematics In computer science proof has found an additional use verifying that a particular system or component or algorithm has certain desirable properties This book teaches students how to read and write proofs using Athena a freely downloadable computer language Athena proofs are machine checkable and written in an intuitive natural deduction style The book contains more than 300 exercises most with full solutions By putting proofs into practice it demonstrates the fundamental role of logic and proof in computer science as no other existing text does Guided by examples and exercises students are quickly immersed in the most useful high level proof methods including equational reasoning several forms of induction case analysis proof by contradiction and abstraction specialization The book includes auxiliary material on SAT and SMT solving automated theorem proving and logic programming The book can be used by upper undergraduate or graduate computer science students with a basic level of programming and mathematical experience Professional programmers practitioners of formal methods and researchers in logic related branches of computer science will find it a valuable reference **Elements**

**of Programming** Alexander Stepanov, Paul McJones, 2019-06-17 Elements of Programming provides a different understanding of programming than is presented elsewhere Its major premise is that practical programming like other areas of science and engineering must be based on a solid mathematical foundation This book shows that algorithms implemented in a real programming language such as C can operate in the most general mathematical setting For example the fast exponentiation algorithm is defined to work with any associative operation Using abstract algorithms leads to efficient reliable secure and economical software **Experimental Algorithms** Andrew V. Goldberg, Alexander S.

Kulikov, 2016-05-31 This book constitutes the refereed proceedings of the 15th International Symposium on Experimental Algorithms SEA 2016 held in St Petersburg Russia in June 2016 The 25 revised full papers presented were carefully reviewed and selected from 54 submissions The main theme of the symposium is the role of experimentation and of algorithm engineering techniques in the design and evaluation of algorithms and data structures SEA covers a wide range of topics in experimental algorithmics bringing together researchers from algorithm engineering mathematical programming and

**Generic Programming and the STL** Matthew H. Austern,1999 Introduces programmers to the generic programming paradigm and to the C Standard Template Library and its use as an extensible framework for generic and interoperable components Explains ideas underlying generic programming and shows how to create algorithms decoupled from the types and data structures they operate on and how to write more efficient code that can be used and reused across platforms Assumes familiarity with C and algorithms Annotation copyrighted by Book News Inc Portland OR     Mathematics of Program Construction ,2004     *AI-Assisted Program Design* Marco T. Morazán,2025-11-26 This book presents systematic prompt engineering to foster effective use of coding assistants and AI based programming The target audience is anyone that has some programming experience and can read analyze and critique code The thesis behind the book is that prompts are programs As such they need to be designed and tested To this end the textbook presents novel design recipes for using a coding assistant and for writing prompts A design recipe is a series of steps each with a concrete outcome that provide scaffolding for programming with coding assistants and for writing prompts The presented design recipes may be applied to programming tasks using any programming language and any coding assistant Designing prompts solidly place prompt engineering in the realm of science much like designing programs do for software engineering The textbook is implementation oriented and throughout every chapter the reader is engaged in software development     The Encyclopedia of Trading Strategies Jeffrey Owen Katz,Donna McCormick,2000-03-21 The Encyclopedia of Trading Strategies is for traders who want to take the next step to consistently profitable trading The authors themselves seasoned veterans of the futures

Generic Programming Jeremy Gibbons,Johan Jeuring,2013-04-17 Generic programming is about making programs more adaptable by making them more general Generic programs often embody non traditional kinds of polymorphism ordinary programs are obtained from them by suitably instantiating their parameters In contrast with normal programs the parameters of a generic program are often quite rich in structure for example they may be other programs types or type constructors class hierarchies or even programming paradigms Generic programming techniques have always been of interest both to practitioners and to theoreticians but only recently have generic programming techniques become a specific focus of research in the functional and object oriented programming language communities Generic Programming comprises the edited proceedings of the Working Conference on Generic Programming which was sponsored by the International Federation for Information Processing IFIP and held in Dagstuhl Germany in July 2002 With contributions from leading researchers around the world this volume captures the state of the art in this important emerging area
