Gentle, 2011-10-25 Any financial asset that is openly traded has a market price Except for extreme market conditions market price may be more or less than a fair value Fair value is likely to be some complicated function of the current intrinsic value of tangible or intangible assets underlying the claim and our assessment of the characteristics of the underlying assets with respect to the expected rate of growth future dividends volatility and other relevant market factors Some of these factors that affect the price can be measured at the time of a transaction with reasonably high accuracy Most factors however relate to expectations about the future and to subjective issues such as current management corporate policies and market environment that could affect the future financial performance of the underlying assets Models are thus needed to describe the stochastic factors and environment and their implementations inevitably require computational finance tools *Complex Systems in Finance and Econometrics* Robert A. Campbell,Ludger Hentschel,1991 It is sometimes argued that an increase in stock market volatility raises required stock returns and thus lowers stock prices This paper modifies the generalized autoregressive conditionally heteroskedastic GARCH model of returns to allow for this volatility feedback effect The resulting model is asymmetric because volatility feedback amplifies large negative stock returns and dampens large positive returns making stock returns negatively skewed and increasing the potential for large crashes The model also implies that volatility feedback is more important when volatility is high In U S monthly and daily data in the period 1926 88 the asymmetric model fits the data better than the standard GARCH model accounting for almost half the skewness and excess kurtosis of standard monthly GARCH residuals Estimated volatility discounts on the stock market range from 1% in normal times to 13% after the stock market crash of October 1987 and 25% in the early 1930 s However volatility feedback has little effect on the unconditional variance of stock returns **journal of financial economics** ,1995
