ASSIGNMENT-I

NAME: Gautam Prajapat

Roll no.: IU2241230417

SUBJECT: BAE

FACULTY: JINESH KAMDAR

[Q-1] GIVE CLASSIFICATION OF AUTOMOBILE ENGINE ?

Ans- Engines are of mainly two types based on the where combustion takes place-

- 1. Internal Combustion Engine (IC Engine)**
- 2. External Combustion Engine (EC Engine)**

Internal Combustion Engine-

- Internal combustion engines are those in which combustion takes place inside the engine. The heat generated due to combustion is used directly to exert pressure on the piston.**
- Every vehicle you can see on the road, all comes under the IC engines, where fuel burns inside the cylinder. For example, petrol engine or diesel engine.**
- Now, Let's jump to the classification of IC engines or types of ic engines where we will classify the IC engine according their terms.**

The Motor Car Giancarlo Genta,Lorenzo Morello,Francesco Cavallino,Luigi Filtri,2014-01-06 This book is an introduction to automotive engineering to give freshmen ideas about this technology The text is subdivided in parts that cover all facets of the automobile including legal and economic aspects related to industry and products product configuration and fabrication processes historic evolution and future developments The first part describes how motor vehicles were invented and evolved into the present product in more than 100 years of development The purpose is not only to supply an historical perspective but also to introduce and discuss the many solutions that were applied and could be applied again to solve the same basic problems of vehicle engineering This part also briefly describes the evolution of automotive technologies and market including production and development processes The second part deals with the description and function analysis of all car subsystems such as vehicle body chassis including wheels suspensions brakes and steering mechanisms diesel and gasoline engines electric motors batteries fuel cells hybrid propulsion systems driveline including manual and automatic gearboxes This part addresses also many non technical issues that influence vehicle design and production such as social and economic impact of vehicles market regulations particularly on pollution and safety In spite of the difficulty in forecasting the paths that will be taken by automotive technology the third part tries to open a window on the future It is not meant to make

predictions that are likely to be wrong but to discuss the trends of automotive research and innovation and to see the possible paths that may be taken to solve the many problems that are at present open or we can expect for the future The book is completed by two appendices about the contribution of computers in designing cars particularly the car body and outlining fundamentals of vehicle mechanics including aerodynamics longitudinal acceleration and braking and transversal path control motion
