### Balloons and Static Electricity

1) Grab the balloon and rub it on the sweater. Describe what happens.

2) Move the balloon near the wall. Describe and draw what happens. Why does this happen?

3) Fill in the blanks..

As the balloon is brought near the \_\_\_\_\_ (positive, negative, neutral) wall, the \_\_\_\_\_ (positive, negative, neutral) balloon moves the \_\_\_\_\_ (protons, electrons) away. This process is called \_\_\_\_\_ (conduction, induction, polarization).

4) Hit the "Reset" button, "Remove Wall," and click on the "Two Balloons" icon. Rub each balloon with approximately the same number of electrons from the sweater. Describe what happens when the balloons are released near each other. Furthermore, explain why this happens.

Brain-powered Science Thomas O'Brien, 2010 How can a long metal needle pass through a balloon without popping it How can water flow at very different rates through two identical funnels How can a stick placed on a table under several sheets of newspaper and extended over the edge of a table snap when quickly struck without lifting or tearing the paper Author Thomas O'Brien takes these and 30 more science inquiry activities to a higher level in this book for educators who love to surprise and challenge their students with unanticipated results Using experiments based on the science of a discrepant event an experiment or demonstration in which the outcome is not what students expect O'Brien shows how learners can be motivated to reconsider their preconceived notions and think more closely about what has actually occurred and the underlying scientific explanations What makes this volume more valuable than a mere activity book is the addition of a science education component to the extensive science content found in each activity Each discrepant event is shown to be analogous to a pedagogical principle Speaking directly to teachers O'Brien writes Your participation as teacher as learner experimenter rather than simply passive reader in these minds on activities will lead you to question and help you to revise your implicit assumptions about the nature of science teaching and learning At the same time you will develop expertise with activities that you can use with your own students The dual purpose activities thus allow you to unlock two doors with one key the doors to your own learning and to your students learning The detailed analogies between the activities and science learning make the book an ideal resource for middle and high school teachers science teacher educators and their preservice students and professional development specialists alike This thorough and thought provoking text includes more than 200 up to date internet resources as well as extensions to each of the physical science biology and chemistry activities bringing the total number of inquiry activities to nearly 120 Most important the author reminds teachers that the study of science is full of surprises and should be both meaningful and fun for students

**Asymmetric Electrostatic Forces and a New Electrostatic Generator** Katsuo Sakai,2010 It is well known that there are three kinds of electrostatic forces gradient force image force and the Coulomb force The gradient force acts on a non charged body that is placed in a convergence electric field Image force acts on a charged body placed nearby a conductive plate The Coulomb force acts on a charged body placed in an electric field As for the shape of these bodies only symmetric forms have been treated in the past The representative example for all three force types is globala sphere Forty years ago potential of a spherical body could be calculated In contrast today we can calculate the potential of any shape by computer simulation In this book simulation of the electrostatic force that acts on asymmetrically shaped conductors is carried out
