Manufacturing William B. Bonvillian, Peter L. Singer, 2023-12-05 How to rethink innovation and revitalize America's declining manufacturing sector by encouraging advanced manufacturing bringing innovative technologies into the production process The United States lost almost one third of its manufacturing jobs between 2000 and 2010 As higher paying manufacturing jobs are replaced by lower paying service jobs income inequality has been approaching third world levels In particular between 1990 and 2013 the median income of men without high school diplomas fell by an astonishing 20% between 1990 and 2013 and that of men with high school diplomas or some college fell by a painful 13% Innovation has been left largely to software and IT startups and increasingly U S firms operate on a system of innovate here produce there leaving the manufacturing sector behind In this book William Bonvillian and Peter Singer explore how to rethink innovation and revitalize America's declining manufacturing sector They argue that advanced manufacturing which employs such innovative technologies as 3 D printing advanced material photonics and robotics in the production process is the key Bonvillian and Singer discuss transformative new production paradigms that could drive up efficiency and drive down costs describe the new processes and business models that must accompany them and explore alternative funding methods for startups that must manufacture They examine the varied attitudes of mainstream economics toward manufacturing the post Great Recession policy focus on advanced manufacturing and lessons from the new advanced manufacturing institutes They consider the problem of startup scaleup possible new models for training workers and the role of manufacturing in addressing secular stagnation in innovation growth the middle classes productivity rates and related investment As recent political turmoil shows the stakes could not be higher **The Hockey Stick Principles** Bobby Martin, 2016-05-24 In The

Hockey Stick Principles author Bobby Martin shifts his focus away from all the hype about rapid growth and the pursuit of funding and instead takes a look at the real process behind getting a good idea off the ground. Many business books fuel unrealistic notions about what a good idea looks like, how fast a founder should attract investment, and how quickly growth will take off. The problem with this mythology is that it can sometimes end with entrepreneurs abandoning their dreams too soon if they don't see immediate results. Using a hockey stick as a metaphor and highlighting four key phases, Martin shows the healthy way a business should grow and uses entertaining stories and interviews with successful entrepreneurs like the founders of LendingTree, Under Armour, and iContact woven throughout the book to not only share a wealth of advice but to chronicle the ins and outs of these different phases: The Tinkering Period (The tip of the stick or the time when you first develop and hone your idea), The Blade Years (The formative years when growth can be flat and navigating the unpredictable process of creating a company can be rocky), The Inflection Point (The crucial point in time right before your business takes off when it's important for entrepreneurs to prepare and make decisions to properly manage rapid growth), and Surging Growth (Once your company proves that they have potential, you need to optimize that growth and scale up in a sensible way). Innovation almost always involves a number of challenges, misdirections, and uncertainty and can take several years of struggle. But *The Hockey Stick Principles* gives aspiring entrepreneurs and those in the midst of the messy process a realistic, human, and inspiring understanding of what starting an innovative business is like while teaching you what to look out for along the way as you shepherd your business through to success.

Venture Capital and the Finance of Innovation Andrew Metrick, Ayako Yasuda, 2021-04-06. An invaluable resource for current and aspiring technology investors, *Venture Capital and the Finance of Innovation* provides an in-depth understanding of the tools and models needed to succeed in this competitive and highly fluid business environment. Building on a comprehensive introduction to fundamental financial and investment principles, the text guides the reader toward a robust skill set using enterprise valuation and preferred stock valuation models, risk and reward, strategic finance, and other concepts central to any venture capital and growth equity investment. Two features of the book stand out from other sources on the subject. First, it pays special attention to the enterprise valuation methodology for high-growth companies: What drives the value of a company that has little physical assets, is losing money now, but has a small chance of achieving great success in several years? How do you create estimates for sales, profit, and return on capital when little data is available? The book answers these questions using a discounted cash flow model that is tailor-made for technology companies (DCF.xlsx, downloadable from the instructor website) and the comparables model. Second, it highlights the most valuation-relevant feature of VC term sheets: namely, the use of convertible preferred stock. The book shows the reader how to use a user-friendly and automated valuation model of VC preferred stock available at www.vcvtools.com to value various types of preferred stock and to visualize how term sheets split the values of the firm between entrepreneurs and VCs. Accessible, comprehensive, and assuming only basic knowledge of venture capital, this text offers essential guidance.
