Development of Isatin as CNS Agents: Anticonvulsant activity Kiran Gangarapu, 2014-05-01 The present study was aimed at synthesizing isatin 5 sulphonamide derivatives are prepared by chlorosulphonation of isatin to prepare isatin 5 sulphonic acid chloride and it is subjected to reaction with different amines or anilines to form respective sulphonamide derivatives The new compounds were characterized based on spectral FT IR NMR and Mass analysis All the test compounds showed CNS depression while studying the gross behavioral changes All the test compounds exhibited reduction in locomotor activity Compound IIIf R p toluidino showed more reduction in the locomotor activity among all the test compounds Compounds III d III c III b III a were next in the order of reduction of locomotor activity The compounds were evaluated for anticonvulsant activity against maximum electric shock induced and Pentylene tetrazol PTZ induced seizures in mice using phenytoin as a standard

Discoveries in Pharmacological Sciences Popat N. Patil, 2012 Since 1805 pure active therapeutic constituents were isolated and chemically characterized Parallel to these developments the science of human anatomy physiology biochemistry genetics and pharmacology has advanced New synthetic drugs were discovered The chemistry of perfumes and sensory functions including memory were elucidated The history of fascinating discoveries made by scientists of Nobel repute was documented Better testing methods were developed The causes of many diseases were better understood Drug laws were instituted a century ago The pharmaceutical industry flourished The text provides a panoramic view of the understanding of when where who how and why drugs were developed Educational aspects of teaching pharmacological sciences are reviewed The historical account will be invaluable to graduate students and creative
