McDermott, 2004-09-21 This book explains the procedures for evaluation potentially harmful exposures to people from hazardous materials including chemicals radon and bioaerosols The author provides practical information on how to perform air sampling collect biological and bulk samples evaluate dermal exposures and determine the advantages and limitations of a given method The original edition published in 1991 has been a valuable resource for Industrial Hygienists safety professionals environmental specialists chemists and others involved in measuring airborne exposures to chemicals microorganisms and radon However much of the equipment specific information is outdated and so the equipment described and illustrated in the book is either no longer available or does not represent state of the art monitoring techniques Additionally the audience for the book can be increased to include public health specialists and emergency responders by adding chapters covering information monitoring during emergency response including bio terrorism agents such as anthrax

Performance Evaluation of a Real-time Aerosol Monitor Kenneth L. Williams, Robert J. Timko, 1984 The Bureau of Mines laboratory tested the response of a commercially available real time aerosol monitor GCA RAM I to various dusts Monitor measurements were recorded averaged and compared with simultaneous gravimetric measurements of each test dust Tests usually lasted several hours The test dusts of various particle size distributions used included coal limestone and a commercially available test dust For each particular dust the monitor response was linear and correlated well with mass concentration over the range of about 0.5 to 10 mg/m³ The monitor can estimate a 2.0 mg/m³ respirable coal dust concentration within as little as 6 pet with 95 pet confidence The monitor must however be calibrated

with the dust to be measured because the instrument response is affected by the type of dust particle The average monitor response to a mass concentration of coal dust was approximately twice the average monitor response to the same mass concentration of limestone dust **Journal of Protective Coatings & Linings** ,1995 **Occupational Hazards** ,1995-07
