Basic Engineering Thermodynamics Rayner Joel:

Basic Engineering Thermodynamics Rayner Joel, 1996 Engineering thermodynamics is the study of and practical application of the successful conversion of heat energy into work energy a transformation fundamental to the existence of our modern industrial society The thermodynamic conversion process lies behind the operation of the internal combustion engine and the generation of power Transport systems such as the motor cars aircraft and railway trains can only function because of this process it also makes possible the generation of the electricity supplying energy for heating lighting and computing and many other processes essential to the modern world Basic Engineering Thermodynamics first published in 1960 provides a comprehensive introduction to the principles and application of the subject The fifth edition has been extensively revised and updated with a new chapter on basic psychrometry and additional material and re drawn illustration throughout This is a core text for BTEC HNC D and degree courses in mechanical engineering

Libraries,1989 **The Revenge of Gaia** James Lovelock,2007-08-02 In The Revenge of Gaia bestselling author James Lovelock father of climate studies and originator of the influential Gaia theory which views the entire earth as a living meta organism provides a definitive look at our imminent global crisis In this disturbing new book Lovelock guides us toward a hard reality soon we may not be able to alter the oncoming climate crisis Lovelock s influential Gaia theory one of the building blocks of modern climate science conceives of the Earth including the atmosphere oceans biosphere and upper layers of rock as a single living super organism regulating its internal environment much as an animal regulates its body temperature and chemical balance But now says Lovelock that organism is sick It is running a fever born of the combination of a sun whose intensity is slowly growing over millions of years and an atmosphere whose greenhouse gases have recently spiked due to human activity Earth will adjust to these stresses but on time scales measured in the hundreds of millennia It is already too late Lovelock says to prevent the global climate from flipping into an entirely new equilibrium state that will leave the tropics uninhabitable and force migration to the poles The Revenge of Gaia explains the stress the planetary system is under and how humans are contributing to it what the consequences will be and what humanity must do to rescue itself
