Combinatorics and Commutative Algebra Richard P. Stanley, 2007-12-13 Some remarkable connections between commutative algebra and combinatorics have been discovered in recent years This book provides an overview of two of the main topics in this area The first concerns the solutions of linear equations in nonnegative integers Applications are given to the enumeration of integer stochastic matrices or magic squares the volume of polytopes combinatorial reciprocity theorems and related results The second topic deals with the face ring of a simplicial complex and includes a proof of the Upper Bound Conjecture for Spheres An introductory chapter giving background information in algebra combinatorics and topology broadens access to this material for non specialists New to this edition is a chapter surveying more recent work related to face rings focusing on applications to f vectors

Combinatorics and Commutative Algebra Richard Stanley, 1996-03-01 Stanley represents a broad perspective with respect to two significant topics from Combinatorial Commutative Algebra 1 The theory of invariants of a torus acting linearly on a polynomial ring and 2 The face ring of a simplicial complex In this new edition the author further develops some interesting properties of face rings with application to combinatorics

Combinatorial Structures in Algebra and Geometry Dumitru I. Stamate, Tomasz Szemberg, 2020-09-01 This proceedings volume presents selected peer reviewed contributions from the 26th National School on Algebra which was held in Constan a Romania on August 26 September 1 2018 The works cover three fields of mathematics algebra geometry and discrete mathematics discussing the latest developments in the theory of monomial ideals algebras of graphs and local positivity of line bundles Whereas interactions between algebra and geometry go back at least to Hilbert the ties to combinatorics are much more recent and are subject of immense interest at the forefront of contemporary mathematics research Transplanting methods between different branches of mathematics has proved very fruitful in the past for example the application of fixed point theorems in topology to solving nonlinear differential equations in analysis Similarly combinatorial structures e g Newton Okounkov bodies have led to significant advances in our understanding of the asymptotic properties of line bundles in geometry and multiplier ideals in algebra This book is intended for advanced graduate students young scientists and established researchers with an interest in the overlaps between different fields of mathematics A volume for the 24th edition of this conference was previously published with Springer under the title Multigraded Algebra and Applications ISBN 978 3 319 90493 1

Enumerative Combinatorics: Volume 1 Richard P. Stanley, 2012 Richard Stanley's two volume basic introduction to enumerative combinatorics has become the standard guide to the topic for students and

experts alike This thoroughly revised second edition of Volume 1 includes ten new sections and more than 300 new exercises most with solutions reflecting numerous new developments since the publication of the first edition in 1986 The author brings the coverage up to date and includes a wide variety of additional applications and examples as well as updated and expanded chapter bibliographies Many of the less difficult new exercises have no solutions so that they can more easily be assigned to students The material on P partitions has been rearranged and generalized the treatment of permutation statistics has been greatly enlarged and there are also new sections on q analogues of permutations hyperplane arrangements the cd index promotion and evacuation and differential posets

Pattern Recognition on Oriented Matroids Andrey O. Matveev, 2017-09-11 Pattern Recognition on Oriented Matroids covers a range of innovative problems in combinatorics poset and graph theories optimization and number theory that constitute a far reaching extension of the arsenal of committee methods in pattern recognition The groundwork for the modern committee theory was laid in the mid 1960s when it was shown that the familiar notion of solution to a feasible system of linear inequalities has ingenious analogues which can serve as collective solutions to infeasible systems A hierarchy of dialects in the language of mathematics for instance open cones in the context of linear inequality systems regions of hyperplane arrangements and maximal covectors or topes of oriented matroids provides an excellent opportunity to take a fresh look at the infeasible system of homogeneous strict linear inequalities the standard working model for the contradictory two class pattern recognition problem in its geometric setting The universal language of oriented matroid theory considerably simplifies a structural and enumerative analysis of applied aspects of the infeasibility phenomenon The present book is devoted to several selected topics in the emerging theory of pattern recognition on oriented matroids the questions of existence and applicability of matroidal generalizations of committee decision rules and related graph theoretic constructions to oriented matroids with very weak restrictions on their structural properties a study in which in particular interesting subsequences of the Farey sequence appear naturally of the hierarchy of the corresponding tope committees a description of the three tope committees that are the most attractive approximation to the notion of solution to an infeasible system of linear constraints an application of convexity in oriented matroids as well as blocker constructions in combinatorial optimization and in poset theory to enumerative problems on tope committees an attempt to clarify how elementary changes one element reorientations in an oriented matroid affect the family of its tope committees a discrete Fourier analysis of the important family of critical tope committees through rank and distance relations in the tope poset and the tope graph the characterization of a key combinatorial role played by the symmetric cycles in hypercube graphs Contents Oriented Matroids the Pattern Recognition Problem and Tope Committees Boolean Intervals Dehn Sommerville Type Relations Farey Subsequences Blocking Sets of Set Families and Absolute Blocking Constructions in Posets Committees of Set Families and Relative Blocking Constructions in Posets Layers of Tope Committees Three Tope Committees Halfspaces Convex Sets and
