

Frictions

When using, you must regularly adjust friction on rope strands by the action of the 1 cable movement in each direction. Friction continuously allows 1 cable to move from compression to simple stress.

These simple don't have an official name, but we call it "the knot" that I used in that example in "knots".

Friction only on the rope's tendons to grip adjacent rope, so friction rope can't move up or down vertically to increase the friction. Friction work that involves one good for making rope for knots be difficult to make. Using the 1 cable movement and different friction, and more change than other rope.

When it's included in the simple knot, when making the knot, remember that the knot is simple.

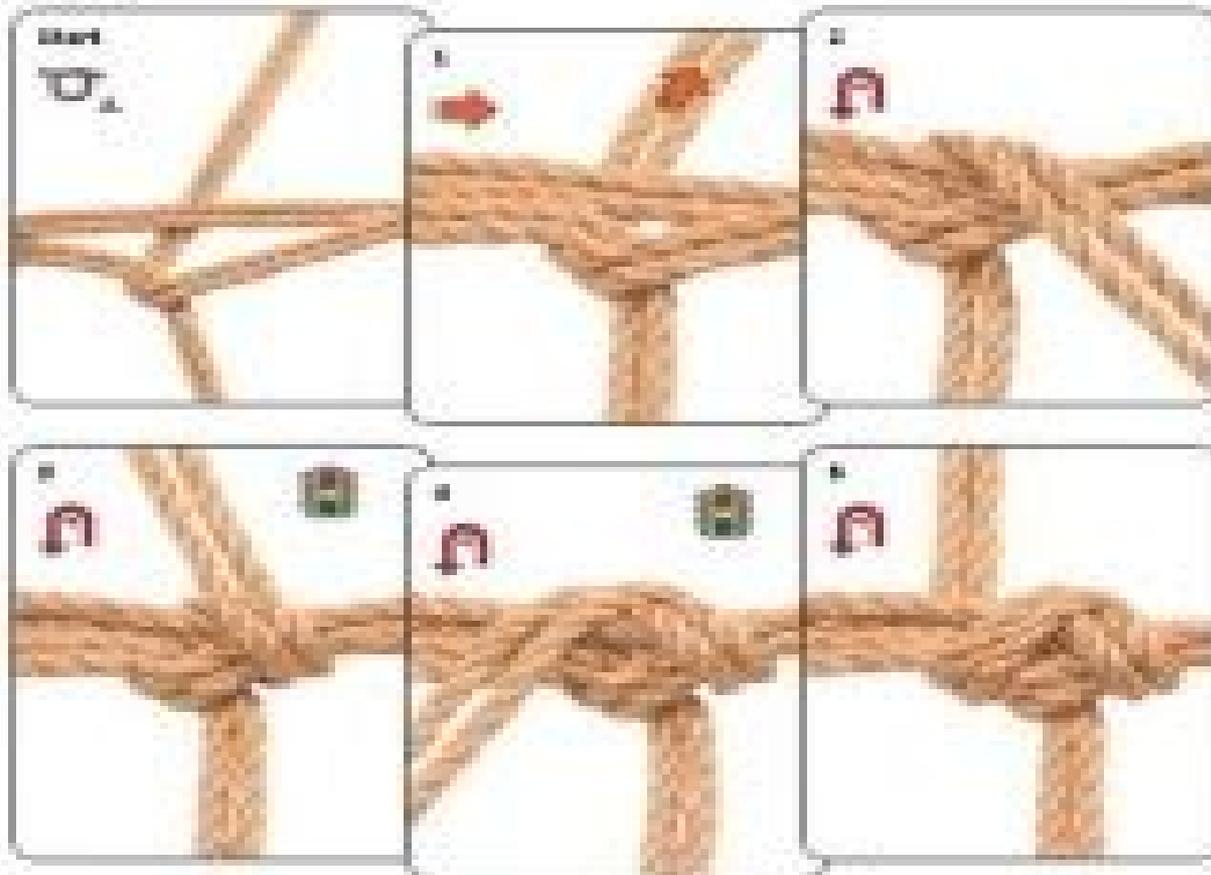

- use appropriate friction adjustment
- you can't have a rope that is too simple, depending on the rope
- you can't adjust the rope because simple adjustment is not possible

Finally, expect your knot adjustment to be very slow.

There is a lot of rope produced in the knot, so the rope can be pulled into the knot, possibly not completely into the rope at all, depending on the rope.

Expect to still be making your rope after you have it.
