Tubular Structures IX R. Puthli, s. Herion, 2026-03-02 A reference for architects and engineers this work covers themes on architecture case studies and the application and strengths of tubular beams This work contains the Kurobane Lecture and papers of the ninth international symposium and EuroConference on tubular structures The symposium provided a platform for the presentation and discussion of a total of 67 peer reviewed papers covering themes on architecture case studies and the application and strengths of tubular beams Looking at design aspects of this construction and technical issues such as columns and frames under static dynamic and fire loading The text is designed as a reference for architects civil and mechanical engineers designers fabricators and contractors involved in tubular structures Design Guide for Hollow Structural Section Connections J. A. Packer, J. E. Henderson, Canadian Institute of Steel Construction, 1992 **Hollow Structural Section Connections and Trusses** Jeffrey A. Packer, J. E. Henderson, Canadian Institute of Steel Construction, 1997 Mechanics and Design of Tubular Structures Karoly Jarmai, Jozsef Farkas, 2014-05-04 This book helps designers and manufacturers to select and develop the most suitable and competitive steel structures which are safe fit for production and economic An optimum design system is used to find the best characteristics of structural models which guarantee the fulfilment of design and fabrication requirements and minimize the cost function Realistic numerical models are used as main components of industrial steel structures Chapter 1 contains some experiences with the optimum design of steel structures Chapter 2 treats some newer mathematical optimization methods Chapter 3 gives formulae for fabrication times and costs Chapters 4 deals with beams and columns Summarizes the Eurocode rules for design Chapter 5 deals with the design of tubular trusses Chapter 6 gives the design of frame structures and fire resistant design rules for a frame In Chapters 7 some minimum cost design problems of stiffened and cellular plates and shells are worked out for cases of different stiffenings and loads Chapter 8 gives a cost comparison of cylindrical and conical shells The book contains a large collection of literatures and a subject list and a name index *Tubular Structures XII* Z.Y. Shen, Y.Y. Chen, Xian-zhong Zhao, 2008-09-11 Presentation of the latest scientific and engineering developments in the field of tubular steel structures Covers key and emerging subjects of hollow structural sections such as static and fatigue behaviour of connections joints concrete filled hollow sections and composite tubular members offshore structures earthquake resistance *Specification for the Design of Steel Hollow Structural Sections*, 1997 **Tubular Structures XV** Eduardo de Miranda Batista, Pedro Vellasco, Luciano Rodrigues Ornelas de Lima, 2015-04-23 Tubular Structures XV contains the latest scientific and engineering developments in the field of tubular structures as presented at the 15th International Symposium on Tubular Structures ISTS15 Rio de Janeiro Brazil 27 29 May 2015 The International Symposium on Tubular Structures ISTS has a long standing reputation for being the principal Branch Plate-to-rectangular Hollow Structural Section Connections Nikola Kosteski, 2001 In recent years the use of rectangular Hollow Structural Sections HSS as columns has become increasingly

popular In many instances rectangular HSS column members are replacing customary I section members due to their superior column performance In turn welded longitudinal branch plates that have been a traditional and convenient method for the connection of brace members and other attachments to I section columns are now similarly used for rectangular HSS columns The current design method consisting of welding a branch plate parallel to the axis of the column has not been thoroughly investigated especially for the effects of connection flexibility of branch plate inclination angle and of axial compression load in the column This represents a known omission in current HSS column connection design knowledge and published design specifications Based on experimental testing of isolated connections parametric non linear Finite Element analysis and analytical yield line analysis the strength and behaviour of longitudinal branch plate to rectangular HSS member connections have been determined On the basis of this design criteria are herein proposed These recommendations have also been reported in technical literature and the recommendations are being incorporated into design specifications and guides for HSS connections A conventional longitudinal branch plate to rectangular HSS member connection tends to cause excessive distortion of the HSS connecting face Such a connection therefore results in a low deformation limit state design resistance In an effort to reduce this inherent flexibility of longitudinal branch plate connections stiffening plates or structural tees can be welded to the HSS connecting face Also a through branch plate connection that extends through both walls of the rectangular HSS member can be used to increase the strength of a standard longitudinal branch plate connection These alternative connections represent the next generation in rectangular HSS connection design Once again based on experimental testing of such connections non linear Finite Element analysis and analytical yield line analysis the strength and behaviour of alternative branch plate to rectangular HSS member connections have been determined and modelled resulting in published recommendations This thesis develops comprehensive rational limit states design procedures and equations that encompass and wherever possible consolidate the behaviour of the multitude of branch plate to rectangular HSS member connection types that will now be available to designers
