While human decision making is valued for

its adaptability and contextual understanding AI driven systems offer the advantage of faster data driven decisions The concept of hybrid intelligence combines these two poles by utilizing the potential of AI without neglecting the necessary integration of human expertise However a structured method for determining the appropriate degree of automation defining the division of tasks between humans and AI for each decision is still lacking Thus this thesis develops a framework to determine the optimal level of Human AI collaboration for production management use cases This framework enables organizations to leverage AI effectively across various scenarios complementing human expertise to enhance operational efficiency and decision making processes By offering a systematic method the framework helps avoid suboptimal AI ML deployments and supports organizations in harnessing hybrid intelligence for innovative and future ready production management
