

INTRODUCTION TO ASPEN PLUS SIMULATION

What is Process Simulation/Analysis?

The purpose of process simulation is to model and predict the performance of a process. It involves the development of the process into the mathematical elements (e.g. units) and subsequent study of performance. The process identification is e.g. flowsheet, instrumentation, composition, process operation, equipment sizes, etc. It can be carried out using analysis techniques (flow simulation, steady state simulation) or fully integrated simulation and optimisation software (e.g. ASPEN Plus). In addition, process analysis may involve the use of experimental data to predict and validate performance. Therefore, in process simulation, we use given the process flowsheet and description and specified input process variables (Fig. 1). The software then use ASPEN Plus, to do a comprehensive analysis which uses the underlying physical relationships (e.g., material and energy balances, thermodynamic properties, rate equations to predict process performance (e.g., stream properties, operating conditions, and equipment sizes).

Fig. 1. Process Simulation Problem

There are several advantages of computer-aided simulation:

- Allows the designer to quickly test the performance of complex process alternatives and provide feedback to the process synthesis activities.
- Can be incorporated with process synthesis to finding optimum integrated designs.
- Minimises experimental and scale-up efforts.
- Explains process flexibility and operability by answering "what-if" questions.
- Quantitatively predicts the process and plant design/operating process performance.

Despite these advantages, there are still some limitations to the existing world of computer-aided simulation:

- It is hard to quickly test the simplified RST simulation model.
- The computational power available on personal computers (PCs) gives the limitation.
- Not all RST simulation processes that the industrial practice require physical process relationships (e.g. pH) can be simulated because of the limited of personal PCs.
