Introduction to Atmospheric Chemistry Daniel J. Jacob, 1999 Atmospheric chemistry is one of the fastest growing fields in the earth sciences Until now however there has been no book designed to help students capture the essence of the subject in a brief course of study Daniel Jacob a leading researcher and teacher in the field addresses that problem by presenting the first textbook on atmospheric chemistry for a one semester course Based on the approach he developed in his class at Harvard Jacob introduces students in clear and concise chapters to the fundamentals as well as the latest ideas and findings in the field Jacob s aim is to show students how to use basic principles of physics and chemistry to describe a complex system such as the atmosphere He also seeks to give students an overview of the current state of research and the work that led to this point Jacob begins with atmospheric structure design of simple models atmospheric transport and the continuity equation and continues with geochemical cycles the greenhouse effect aerosols stratospheric ozone the oxidizing power of the atmosphere smog and acid rain Each chapter concludes with a problem set based on recent scientific literature This is a novel approach to problem set writing and one that successfully introduces students to the prevailing issues This is a major contribution to a growing area of study and will be welcomed enthusiastically by students and teachers alike

Controlling Air Pollution in China Therese Feng,1999 Rapid economic growth in China has been fueled by and continues to stimulate a huge demand for power posing significant challenges to local regional and international atmospheric environments This timely book assesses this environmental risk and considers the efficient design of environmental policy in the development of new coal fired plants in China Coal fired electricity generation currently accounts for about 80 per cent of China s power sector and so it is vital to establish how new plants can be designed to minimize the harmful environmental effects of this type of power generation In designing pollution control policies in China there is a need to identify appropriate policies for a fast developing economy where incomes attitudes and technology are also rapidly evolving Therese Feng explores the use of societal values in developing environmental policies and presents an integrated assessment which carefully characterizes the nature and value of environmental damage using the model of a new coal fired power plant Finally the author defines an environmental policy

which is sensitive to local variables and transboundary effects Controlling Air Pollution in China will be of interest to energy and environmental economists and policymakers Journal of Industrial and Engineering Chemistry ,1912 **Chemistry International** ,1993 **Proceedings of the ...
