

## Student Exploration: Half-Life

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

1. What does your teacher tell you a half-life is? How, if possible, can you test what you believe it is?

1. Yes, I know it is halving amount.

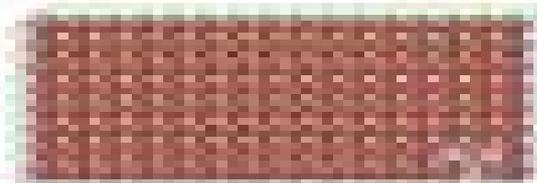

2. If you have the same amount of something at the start of a process, does it take the same amount of time to change 1/2 of it?

Yes, about the same, but it can be longer depending on what it is.

**Warm-Up**

Like an unopened bottle of soda, the substance in **Substance A** contains about the same amount of energy. It has a half-life of 10 minutes. If you start with 100 grams of Substance A, how much of it will be left after 10 minutes? After 20 minutes? After 30 minutes? After 40 minutes? After 50 minutes?

The Gizmo lets you change the amount of Substance A and measure how much is left in a half-life. The number shown is the amount and the flag is 100.

Substance A: 100

3. What do you see when you start?

A. 100 particles of substance A.

**Notes:** The starting amount of substance A is 100 grams. The amount of substance A that remains after a half-life is 50 grams. The amount of substance A that remains after two half-lives is 25 grams.

4. What amount of substance A is left after 10 minutes?

50 grams.

5. In the simulation, what is the beginning amount of substance A?

The total amount of substance A is 100 grams.
