these important events were merged together giving weight to the fact that multi agent systems currently represent one of the hottest topics in AI research The name ACAI 2001 Summer School is intended to emphasize that this event continues the tradition of regular ECCAI activities ACAI as well as the EASSS summer schools of AgentLink The Prague ACAI Summer School was proposed and initiated by both the Gerstner Laboratory Czech Technical University Prague GL CTU and the Czech Society for Cybernetics and Informatics CSKI with the support of the Austrian Research Institute for Artificial Intelligence in Vienna OFAI Part of our motivation was catalyzed by experience gained in 1992 during the International Summer School Advanced Topics in Artificial Intelligence see Springer s LNAI vol 617 which was organized by the same Czech and Austrian bodies One of the most important stimulating factors behind the organization of ACAI 2001 was the support provided by the European Commission to the Gerstner Laboratory within the frame of the MIRACLE Center of Excellence project IST No **Agent and Multi-agent Technology for Internet and Enterprise Systems** Anne

Hakansson,Ronald Hartung,Ngoc Thanh Nguyen,2010-06-17 Research in multi agent systems offers a promising technology for problems with networks online trading and negotiations but also social structures and communication This is a book on agent and multi agent technology for internet and enterprise systems The book is a pioneer in the combination of the fields and is based on the concept of developing a platform to share ideas and presents research in technology in the field and application to real problems The chapters range over both applications illustrating the possible uses of agents in an enterprise domain and design and analytic methods needed to provide the solid foundation required for practical systems

Intelligent Agents and Multi-agent Systems ,2003 **Mobile Agents** Peter Braun,Wilhelm R. Rossak,2005-01-21 Mobile agents are software nomads that act as your personal representative working autonomously through networks They are able to visit network nodes directly using available computing power and are not limited by platform This emerging field is now poised to become a cornerstone for new Web based ubiquitous computing environments Mobile Agents provides a practical introduction to mobile agent technology and surveys the state of the art in mobile agent research Students and researchers can use the book as an introduction to the concepts and possibilities of this field and as an overview of ongoing research Developers can use it to identify the capabilities of the technology to decide if mobile agents are the right solution for them Practitioners can also gain hands on experience in programming mobile agents through exploration of the source code for a complete mobile agent environment available through the companion website Summarizes the state of the art in mobile agent research Identifies the benefits and limitations of current mobile agent technology to help developers understand the possibilities of this new field Extensive mobile agents web portal www.mobileagents.org with the Java source code for a complete industrial quality environment for mobile agents with significant parts of the system open source

Intelligent Agents Michael J. Wooldridge,1995-01-26 This volume coherently present 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included *Distributed Artificial Intelligence Meets Machine Learning Learning in Multi-Agent Environments* Gerhard Weiß,1997-04-29 This state of the art report documents current and ongoing developments in the area of learning in DAI systems It is indispensable reading for anybody active in the area and will serve as a valuable source of information and inspiration for AI and ML professionals wishing to learn about this new interdisciplinary field or to prepare themselves for doing relevant research

Software Engineering for Multi-agent Systems ... ,2006 *Intelligent Agents for Telecommunications Applications* Sahin Albayrak,1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information

superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain *Agent-Based Software Development* ,2004
