Problem 1: Liquid Pressure
Continuation of Page 100

As you worked with the liquid pressure apparatus, you noticed that pressure increases with depth. This is because the weight of the liquid above increases with depth. The pressure at a certain depth is the weight of the liquid above divided by the area of the surface. The pressure at a certain depth is the same in all directions. This is because the liquid is equally heavy in all directions.

Key Concept: Pressure
 Pressure is the force exerted per unit area. It is a scalar quantity. The pressure at a certain depth in a liquid is the same in all directions. This is because the liquid is equally heavy in all directions.
