If we picked out one strawberry sweet, there would be 2 strawberry sweets and 4 lemon sweets left.

The probabilities of picking each type of sweet are:

$$P(\text{Strawberry}) = \frac{2}{6}$$

Logical Structures for Representation of Knowledge and Uncertainty Ellen Hisdal, 2013-04-17 It is the business of science not to create laws but to discover them We do not originate the constitution of our own minds greatly as it may be in our power to modify their character And as the laws of the human intellect do not depend upon our will so the forms of science of 1 1 which they constitute the basis are in all essential regards independent of individual choice George Boole 10 p 11J 1 1 Comparison with Traditional Logic The logic of this book is a probability logic built on top of a yes no or 2 valued logic It is divided into two parts part I BP Logic and part II M Logic BP stands for Bayes Postulate This postulate says that in the absence of knowledge concerning a probability distribution over a universe or space one should assume 1 a uniform distribution 2 The M logic of part II does not make use of Bayes postulate or of any other postulates or axioms It relies exclusively on purely deductive reasoning following from the definition of probabilities The M logic goes an important step further than the BP logic in that it can distinguish between certain types of information supply sentences which have the same representation in the BP logic as well as in traditional first order logic although they clearly have different meanings see example 6 1 2 also comments to the Paris Rome problem of eqs 1 8 1 9 below
