Proakis,Masoud Salehi,1998 This text contains a large number of MATLAB based problems dealing with topics covered in a first course in communication systems Each chapter contains fundamental concepts briefly reviewed and presents illustration problems using MATLAB Each chapter contains a list of MATLAB files used   Contemporary Communication Systems Using MATLAB and Simulink John G. Proakis,Masoud Salehi,Gerhard Bauch,2004 Featuring a variety of applications that motivate students this book serves as a companion or supplement to any of the comprehensive textbooks in communication systems The book provides a variety of exercises that may be solved on the computer using MATLAB The authors assume that the student is familiar with the fundamentals of MATLAB By design the treatment of the various topics is brief The authors provide the motivation and a short introduction to each topic establish the necessary notation and then illustrate the basic concepts by means of an example

Contemporary Communication Systems Using MATLAB John G. Proakis,Masoud Salehi,2000 This supplement to any standard communication systems text is one of the first books to successfully integrate the use of MATLAB in the study of communication systems concepts and problems It has been developed for instructors and students who wish to make use of MATLAB as an integral part of their study The former will find the means by which to use MATLAB as a powerful tool to motivate students and illustrate essential theory without having to customize the applications themselves the latter will find relevant problems quickly and easily The book includes numerous MATLAB based simulations and examples of communication systems while providing a good balance of theory and hands on computer experience This Updated Printing revises the book and MATLAB files available for downloading from the Brooks Cole Bookware Companion Resource Center Web Site to MATLAB V5   **Modern Communication Systems Using MATLAB** Gerhard Bauch,2011-12 Featuring a variety of applications that motivate students this book serves as a companion or supplement to any of the comprehensive textbooks in communication systems The book provides a variety of exercises that may be solved on the computer using MATLAB By design the treatment of the various topics is brief The authors provide the motivation and a short introduction to each topic establish the necessary notation and then illustrate the basic concepts by means of an example   Digital Signal Processing with Matlab Examples, Volume 1 Jose Maria Giron-Sierra,2016-11-19 This is the first volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This book includes MATLAB codes to illustrate each of the main steps of the theory offering a self contained guide suitable for independent study The code is embedded in the text helping readers to put into practice the ideas and methods discussed The book is divided into three parts the first of which introduces readers to periodic and non periodic signals The second part is devoted to filtering which is an important and commonly used application The third part addresses more advanced topics including the analysis of real world non stationary signals and

data e g structural fatigue earthquakes electro encephalograms birdsong etc The book s last chapter focuses on modulation an example of the intentional use of non stationary signals **Communication System Design Using DSP Algorithms** Steven A. Tretter,2003-01-31 Designed for senior electrical engineering students this textbook explores the theoretical concepts of digital signal processing and communication systems by presenting laboratory experiments using real time DSP hardware The experiments are designed for the Texas Instruments TMS320C6701 Evaluation Module or TMS320C6711 DSK but can easily be adapted to other DSP boards Each chapter begins with a presentation of the required theory and concludes with instructions for performing experiments to implement the theory In the process of performing the experiments students gain experience in working with software tools and equipment commonly used in industry **Essentials of Modern Communications** Djafar K. Mynbaev,Lowell L. Scheiner,2020-07-09 Explore Modern Communications and Understand Principles of Operations Appropriate Technologies and Elements of Design of Communication Systems Modern society requires a different set of communication systems than has any previous generation To maintain and improve the contemporary communication systems that meet ever changing requirements engineers need to know how to recognize and solve cardinal problems In Essentials of Modern Communications readers will learn how modern communication has expanded and will discover where it is likely to go in the future By discussing the fundamental principles methods and techniques used in various communication systems this book helps engineers assess troubleshoot and fix problems that are likely to occur In this reference readers will learn about topics like How communication systems respond in time and frequency domains Principles of analog and digital modulations Application of spectral analysis to modern communication systems based on the Fourier series and Fourier transform Specific examples and problems with discussions around their optimal solutions limitations and applications Approaches to solving the concrete engineering problems of modern communications based on critical logical creative and out of box thinking For readers looking for a resource on the fundamentals of modern communications and the possible issues they face Essentials of Modern Communications is instrumental in educating on real life problems that engineering students and professionals are likely to encounter

Contemporary Communication Systems Using MATLAB John G. Strum,Donald E. Kirk,1994 This is a title in the PWS series BookWare Companion Series It is a set of correlated self contained courseware modules covering

fundamental concepts in engineering and applied mathematics Students work through example problems electronically and are encouraged to experiment with problems and data in an electronic lab setting Each BookWare Companion features a software script for the electronic examples based on a popular applications software package for the IBM PC or the Macintosh and a printed volume containing computer based exploration exercises and a variety of learning aids and hints The text bolstered by illustrative examples 200 problems and MATLAB exploration exercises on the accompanying data disk should enable students to work with linear systems problems in a virtual laboratory at the computer changing problem values at will in a what if fashion **Software Receiver Design** C. Richard Johnson, Jr,William A. Sethares,Andrew G. Klein,2011-08-18 Have you ever wanted to know how modern digital communications systems work Find out with this step by step guide to building a complete digital radio that includes every element of a typical real world communication system Chapter by chapter you will create a MATLAB realization of the various pieces of the system exploring the key ideas along the way as well as analyzing and assessing the performance of each component Then in the final chapters you will discover how all the parts fit together and interact as you build the complete receiver In addition to coverage of crucial issues such as timing carrier recovery and equalization the text contains over 400 practical exercises providing invaluable preparation for industry where wireless communications and software radio are becoming increasingly important A variety of extra resources are also provided online including lecture slides and a solutions manual for instructors Performance Optimization of Digital Communications Systems Vladimir Mitlin,2006-03-21 Because fine tuning the parameters of a system is critical to a developer s success Performance Optimization of Digital Communications Systems examines particular optimization problems in digital communications presenting analytical techniques in combination with SystemView and MATLAB simulations Consisting of ten chapters this monograph presen Discrete Systems Laboratory Using MATLAB Martin Schetzen,Vinay K. Ingle,2000 This brief paperbound supplement provides 16 hands on laboratory experiments that students can perform using MATLAB in lab sections that accompany lecture courses in Linear Systems or DSP The 16 experiments are grouped in four main topic areas sampling and digital to analog D A conversion the discrete time Fourier transform gain and phase shift studies of digital filters and analog to digital A D quantization See TOC below for a listing of specific lab experiments The goal of these experiments is to enable students to understand the full physical significance of key concepts through a deeper understanding of the underlying mathematical formulas not to teach MATLAB In each experiment students enter problem parameter values plot the results using MATLAB s powerful plotting functions and then respond to questions in the manual that require them to analyze and interpret these results The experiments challenge students to approach the study of these topics in the role of an experimental investigator students are required to define the quantitative values and size properties of each design criterion in a problem As a result students develop an appreciation of the physical meaning of the derived results their theoretical and physical implications and the use of the scientific method
