Practical Algorithms George Richard Yool, 2014-06-13 An algorithm is a solution to a class of problems generally contained in programming unit called a module and accessed by one or more objected oriented programs A class on algorithms is a class on problem solving with the expectation of marketable results This requires a textbook that actually provides problem solving tools Solving the problems is hard enough The tools should be the easy part Practical Algorithms provides a complete toolbox from meeting the client to rolling out a scalable solution fitting the client s needs The typical algorithms text focuses on pseudocode which at best lays out business rules and at worst solves nothing As such pseudocode is given minimal attention Using MCSE MCSD and other marketable standards as a basic guideline this text applies practical experiences in the field and classroom to make this extremely difficult material as simple as possible This book took a failed class at multiple institutions made the concepts accessible and led every student to not only succeed in the class but to have what they needed in their careers The first subject created a line of grateful engineers and project managers on the first day of class The subject sales from meet and

greet to proposal and contract writing to closing the deal Every class meeting we systematically explored vital elements to breaking down and solving problems from system and network architectures to hard coding and n tiered databases This book turned a failed class into a success story

Shortest Path Solvers. From Software to Wetware Andrew Adamatzky,2018-04-26 This book offers advanced parallel and distributed algorithms and experimental laboratory prototypes of unconventional shortest path solvers In addition it presents novel and unique algorithms of solving shortest problems in massively parallel cellular automaton machines The shortest path problem is a fundamental and classical problem in graph theory and computer science and is frequently applied in the contexts of transport and logistics

telecommunication networks virtual reality and gaming geometry and social networks analysis Software implementations include distance vector algorithms for distributed path computation in dynamics networks parallel solutions of the constrained shortest path problem and application of the shortest path solutions in gathering robotic swarms Massively parallel algorithms utilise cellular automata where a shortest path is computed either via matrix multiplication in automaton arrays or via the representation of data graphs in automaton lattices and using the propagation of wave like patterns Unconventional shortest path solvers are presented in computer models of foraging behaviour and protoplasmic network optimisation by the slime mould Physarum polycephalum and fluidic devices while experimental laboratory prototypes of path solvers using chemical media flows and droplets and electrical current are also highlighted The book will be a pleasure to explore for readers from all walks of life from undergraduate students to university professors from mathematicians computers scientists and engineers to chemists and biologists
