## **Coders At Work Reflections On The Craft Of Programming:**

Coders at Work Peter Seibel, 2009-12-21 Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work* offering a companion volume to Apress's highly acclaimed best seller *Founders at Work* by Jessica Livingston. As the words at work suggest Peter Seibel focuses on how his interviewees tackle the day to day work of programming while revealing much more like how they became great programmers how they recognize programming talent in others and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the *Coders at Work* web site [www.codersatwork.com](http://www.codersatwork.com). The complete list was 284 names. Having digested everyone's feedback we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen Pioneer in optimizing compilers first woman to win the Turing Award 2006 and first female IBM fellow; Joe Armstrong Inventor of Erlang; Joshua Bloch Author of the Java collections framework now at Google; Bernie Cosell One of the main software guys behind the original ARPANET IMPs and a master debugger; Douglas Crockford JSON founder JavaScript architect at Yahoo; L. Peter Deutsch Author of Ghostscript implementer of Smalltalk 80 at Xerox PARC and Lisp 1.5 on PDP 1; Brendan Eich Inventor of JavaScript CTO of the Mozilla Corporation; Brad Fitzpatrick Writer of LiveJournal OpenID memcached and Perlbal; Dan Ingalls Smalltalk implementor and designer; Simon Peyton Jones Coinventor of Haskell and lead designer of Glasgow Haskell Compiler; Donald Knuth Author of *The Art of Computer Programming* and creator of TeX; Peter Norvig Director of Research at Google and author of the standard text on AI; Guy Steele Coinventor of Scheme and part of the Common Lisp Gang of Five currently working on Fortress; Ken Thompson Inventor of UNIX; Jamie Zawinski Author of XEmacs and early Netscape Mozilla hacker.

explores computation's evolution from predictable algorithms to adaptive systems through hands on projects that demand both technical skill and conceptual understanding You won't just read about virtual machines or language models You'll implement them experiment with them and develop intuition about when each approach makes sense Each project builds on the last creating a learning journey from mechanical precision to fluid reasoning The project based approach means you'll spend more time building than reading more time experimenting than memorizing You'll encounter challenges that require creative problem solving debug systems that behave in unexpected ways and gradually develop the kind of judgment that only comes from direct engagement with computational systems The book assumes working knowledge of Python and C at an intermediate level along with familiarity with basic computer science concepts but the real prerequisite is willingness to learn through making If you're ready to expand beyond writing code to reasoning about systems and to do so by building rather than just studying this book is your guide

maintainable and modular code

**Recoding Gender** Janet Abbate, 2017-09-08 The untold history of women and computing how pioneering women succeeded in a field shaped by gender biases Today women earn a relatively low percentage of computer science degrees and hold proportionately few technical computing jobs Meanwhile the stereotype of the male computer geek seems to be everywhere in popular culture Few people know that women were a significant presence in the early decades of computing in both the United States and Britain Indeed programming in postwar years was considered woman's work perhaps in contrast to the more manly task of building the computers themselves In *Recoding Gender* Janet Abbate explores the untold history of women in computer science and programming from the Second World War to the late twentieth century Demonstrating how gender has shaped the culture of computing she offers a valuable historical perspective on today's concerns over women's underrepresentation in the field Abbate describes the experiences of women who worked with the earliest electronic digital computers Colossus the wartime codebreaking computer at Bletchley Park outside London and the American ENIAC developed to calculate ballistics She examines postwar methods for recruiting programmers and the 1960s redefinition of programming as the more masculine software engineering She describes the social and business innovations of two early software entrepreneurs Elsie Shutt and Stephanie Shirley and she examines the career paths of women in academic computer science Abbate's account of the bold and creative strategies of women who loved computing work excelled at it and forged successful careers will provide inspiration for those working to change gendered computing culture

**The Philosophical Programmer** Daniel Kohanski, 1998 In the tradition of *The Existential Pleasures of Engineering* this meditative and enlightening work creates a new philosophical approach to programming

**The Clean Coder** Robert C. Martin, 2011 Presents practical advice on the disciplines techniques tools and practices of computer programming and how to approach software development with a sense of pride honor and self respect

**Programmers and Managers** P. Kraft, 1977-07-18 Norbert Wiener perhaps better than anyone else understood the intimate and delicate relationship between control and communication that messages intended as commands do not necessarily differ from those intended simply as facts Wiener noted the paradox when the modem computer was hardly more than a laboratory curiosity Thirty years later the same paradox is at the heart of a severe identity crisis which confronts computer programmers Are they primarily members of management acting as foremen whose task it is to ensure that orders emanating from executive suites are faithfully translated into comprehensible messages Or are they perhaps simply

engineers preoccupied with the technical difficulties of relating software to hardware and vice versa Are they aware furthermore of the degree to which their work whether as manager or engineer routinizes the work of others and thereby helps shape the structure of social class relationships I doubt that many of us who lived through the first heady and frantic years of software development at places like the RAND and System Development Corporations ever took time to think about such questions The science fiction like setting of mysterious machines blinking lights and torrents of numbers served to awe outsiders who could only marvel at the complexity of it all We were insiders who constituted a secret society into which only initiates were welcome So today I marvel at the boundless audacity of a rank outsider in writing a book like **Programmers and Managers**

**A Programmer's Rantings: On Programming-Language Religions, Code Philosophies, Google Work Culture, and Other Stuff** Steve Yegge, 2012-12-01 This book grew out of a lot of angst Well and wine Put enough angst in me and I'll start ranting Pour in some wine and the rants get mean and funny I still go back and read these posts now and then and I always laugh I was so mean My angst grew out of traveling different roads than most programmers Those roads forced me to see the world differently Now I see all sorts of patterns that many experienced programmers fail to see because well to put it bluntly they're stuck in ruts Over the past 25 years I've done a bunch of dramatically different types of programming and I've also written far more code than any programmer ever should The long roads I've traveled have basically given me a sixth sense I see dead people And it sucks If you're ever unlucky enough to acquire a dreadful sixth sense there are really only two choices you can be angry and depressed about it or you can laugh about it So I try to laugh It's hard but I'm getting better at it The wine helps Practice helps too You need to get in the habit of laughing at yourself at others at the crazy world we live in or in time you'll just stop laughing altogether When I first started ranting I was the ugly American stomping around in my posts and essentially yelling What the hell is wrong with all you people But over the next ten years or so I like to think I've grown into more of an amateur software anthropologist I now take cultural relativism seriously and I try hard not to judge people who think differently from me Of course I don't mind poking fun at them because I don't mind people poking fun at me And ultimately I would like to convince undecided programmers to share my view of the programming world because programming works best if everyone nearby does it the same way So I'll continue to argue that my view which I've recently taken to calling software liberalism is a perfectly valid and perhaps even preferable way to do a lot of software development Converting everyone to be more liberal is doomed to fail of course But even so I hope I can still help people in radically different software cultures to understand each other better I'm going to keep ranting because it appears to be the only way to make a message sink in to a very large audience Some people still tell me that my blog posts are too long They tell me I could have made my point in under a hundred words I have noticed that this complaint comes most often from people who disagree with me They're really just saying they want less work to voice their disagreement But even some folks who agree with me find the posts too long to carry their attention and they complain too They're missing the

point though The posts aren't too long You need a certain minimum heft to penetrate Through years of trial and error I've found that the best way to get a lot of people to listen to you is to tell them a story And you can't spin a good yarn without settling in and enjoying the ride So that's what this book is It's really a bunch of stories Each might take the form of an article essay guide rant or occasionally a fiction tale But behind the structure each one of them is sharing a story Even if you don't always agree I'm hoping you'll at least find the stories entertaining and with luck sometimes even eye opening The guys at Hyperink chose which of my posts to include by and large and they also came up with the overall chapter organization I made a couple of tweaks but what you're looking at is largely their vision of how to curate this stuff into a cohesive book I think they did an admirable job I hope you enjoy the journey as much as I did Steve Yegge August 2012
