Thermodynamics Arthur Shavit, Chaim Gutfinger, 2009-06-03 There are many thermodynamics texts on the market yet most provide a presentation that is at a level too high for those new to the field This second edition of Thermodynamics continues to provide an accessible introduction to thermodynamics which maintains an appropriate rigor to prepare newcomers for subsequent more advanced topics The book presents a logical methodology for solving problems in the context of conservation laws and property tables or equations The authors elucidate the terms around which thermodynamics has historically developed such as work heat temperature energy and entropy Using a pedagogical approach that builds from basic principles to laws and eventually corollaries of the laws the text enables students to think in clear and correct thermodynamic terms as well as solve real engineering problems For those just beginning their studies in the field Thermodynamics Second Edition provides the core fundamentals in a rigorous accurate and accessible presentation

NUMERICAL, SYMBOLIC AND STATISTICAL COMPUTING FOR CHEMICAL ENGINEERS USING MATLAB Ghosh, Pallab, 2018-09-01 Numerical analytical and statistical computations are routine affairs for chemical engineers They usually prefer a single software to solve their computational problems and at present MATLAB has emerged as a powerful computational language which is preferably used for this purpose due to its built in functions and toolboxes Considering the needs and convenience of the students the author has made an attempt to write this book which explains the various concepts of MATLAB in a systematic way and makes its readers proficient in using MATLAB for computing It mainly focuses on the applications of MATLAB rather than its use in programming basic numerical algorithms Commencing with the introduction to MATLAB the text covers vector and matrix computations solution of linear and non linear equations differentiation and integration and solution of ordinary and partial differential equations Next analytical computations using the Symbolic Math Toolbox and statistical computations using the Statistics and Machine Learning Toolbox are explained Finally the book describes various curve fitting techniques using the Curve Fitting Toolbox Inclusion of all these advanced level topics in the book stands it out from the rest

**KEY FEATURES** Numerous worked out examples to enable the readers understand the steps involved in solving the chemical engineering problems MATLAB codes to explain the computational techniques Several snapshots to help the readers understand the step by step procedures of using the toolboxes Chapter end exercises including short answer questions and numerical problems Appendix comprising the definitions of some important and special matrices Supplemented with
