Modeling Methods For Marine Science:

Modeling Methods for Marine Science David M. Glover, William J. Jenkins, Scott C. Doney, 2011-06-02 This advanced textbook on modeling data analysis and numerical techniques for marine science has been developed from a course taught by the authors for many years at the Woods Hole Oceanographic Institute The first part covers statistics singular value decomposition error propagation least squares regression principal component analysis time series analysis and objective interpolation The second part deals with modeling techniques finite differences stability analysis and optimization The third part describes case studies of actual ocean models of ever increasing dimensionality and complexity starting with zero dimensional models and finishing with three dimensional general circulation models Throughout the book hands on computational examples are introduced using the MATLAB programming language and the principles of scientific visualization are emphasised Ideal as a textbook for advanced students of oceanography on courses in data analysis and numerical modeling the book is also an invaluable resource for a broad range of scientists undertaking modeling in chemical biological geological and physical oceanography

Numerical Ocean Circulation Modeling Aike Beckmann, Dale B Haidvogel, 1999-04-29 This book offers a comprehensive overview of the models and methods employed in the rapidly advancing field of numerical ocean circulation modeling For those new to the field concise reviews of the equations of oceanic motion sub grid scale parameterization and numerical approximation techniques are presented and four specific numerical models chosen to span the range of current practice are described in detail For more advanced users a suite of model test problems is developed to illustrate the differences among models and to serve as a first stage in the quantitative evaluation of future algorithms The extensive list of references makes this book a valuable text for both graduate students and postdoctoral researchers in the marine sciences and in related fields such as meteorology and climate and coupled biogeochemical modeling

Modern Approaches to Data Assimilation in Ocean Modeling P. Malanotte-Rizzoli, 1996-05-10 The field of oceanographic data assimilation is now well established The main area of concern of oceanographic data assimilation is the necessity for systematic model improvement and ocean state estimation In this respect the book presents the newest innovative applications combining the most sophisticated assimilation methods with the most complex ocean circulation models Ocean prediction has also now emerged as an important area in itself The book contains reviews of scientific oceanographic issues covering different time and space scales The application of data assimilation methods can provide significant advances in the understanding of this subject Also included are the first recent developments in the forecasting of oceanic flows Only original articles that have undergone full peer review are presented to ensure the highest scientific quality This work provides an excellent coverage of state of the art oceanographic data assimilation

Modeling Marine Systems A. M. Davies, 2018-01-18 This two volume reference presents a series of review and research articles on advances in computing marine physics and remote sensing and addresses their importance to shallow sea modeling Intended as a tribute to Dr Norman Heaps topics in the book reflect the range and diversity of his work as well as his influence on international marine science Topics discussed include numerical techniques flow in homogenous sea regions stratified flows lake regimes validation of numerical models remote sensing as a method to collect oceanographic data at the sea surface and bottom boundary modeling Marine scientists actively involved in mathematical modeling and scientists who are interested in using models as tools to gain more insight and understanding of the processes they are observing will find this text useful
