Machine Learning and Data Mining in Aerospace Technology About Ella Hassanien, Ashraf Darwish, Hesham El-Askary, 2019-07-02 This book explores the main concepts algorithms and techniques of Machine Learning and data mining for aerospace technology Satellites are the eagle eyes that allow us to view massive areas of the Earth simultaneously and can gather more data more quickly than tools on the ground Consequently the development of intelligent health monitoring systems for artificial satellites which can determine satellites current status and predict their failure based on telemetry data is one of the most important current issues in aerospace engineering This book is divided into three parts the first of which discusses central problems in the health monitoring of artificial satellites including tensor based anomaly detection for satellite telemetry data and machine learning in satellite monitoring as well as the design implementation and validation of satellite simulators The second part addresses telemetry data analytics and mining problems while the last part focuses on security issues in telemetry data

Advanced Cyber Defense for Space Missions and Operations: Concepts and Applications Gupta, Brij B., Ip, Andrew W. H., 2025-04-18 Cutting edge techniques and strategies are necessary to protect space missions from cyber threats The latest advancements in cyber defense technologies offer insights into the unique challenges of securing space based systems and infrastructure Additionally a combination of theoretical insights and practical applications provides a holistic understanding of cyber security tailored specifically for the space industry Securing space missions against and understanding the complexities of cyber threats are of critical importance Advanced Cyber Defense for Space Missions and Operations Concepts and Applications addresses the intersection of cyber security and space missions a field of growing importance as space exploration and satellite technologies continue to advance By providing a detailed examination of contemporary cyber defense strategies this publication offers innovative solutions and best practices for enhancing the security of space missions Covering topics such as cyber physical systems attack detection models and geopolitical shifts this book is an excellent resource for cyber security specialists aerospace engineers IT professionals policymakers defense strategists researchers professionals scholars academicians and more

CubeSat Command and Control Barrett Williams, ChatGPT, 2024-12-26 Embark on a journey through the cutting edge world of miniature satellite technology with CubeSat Command and Control This eBook is your essential guide to mastering the intricate art of managing these diminutive yet powerful satellites Whether you are an industry enthusiast a student aspiring to enter the aerospace field or a seasoned space professional seeking updated insights this book offers invaluable knowledge at every turn Start by exploring the Fundamentals of CubeSat Systems and gain a solid understanding of these revolutionary small satellites and their evolution With in depth analysis uncover the Essential Command and Control Principles crucial for remote satellite operations Navigate the challenges with confidence by selecting the right Communication Protocols tailored for CubeSat needs and learn to build Robust Ground Station Networks for optimal data handling and security Dive into the future with

chapters on Automating Command Scripts and discovering Advanced Strategies for Real time Telemetry to keep your satellite operations fluid and responsive No satellite mission can overlook security and this book expertly covers the implementation of Data Encryption and Security Protocols ensuring every transmission is safeguarded In a domain where efficiency is vital gain insights into Power Management and the latest energy harvesting techniques Learn how to manage Software Updates and Modular Upgrades with precision and adapt to the harsh Environmental Conditions of Space effortlessly For those looking to push boundaries explore the role of AI in CubeSat Operations its potential in autonomous decision making and its revolutionary impact on predictive maintenance Touch upon the critical Legal and Regulatory Considerations preparing you for global compliance as you navigate international space laws Then delve into Case Studies and Practical Applications drawing lessons and inspiration from successful CubeSat missions Finally consolidate your learning with insider strategies on Planning and Executing a CubeSat Mission taking you from conceptualization to post launch operations seamlessly CubeSat Command and Control is not just a book it s your gateway to the stars

Semi-supervised Deep Learning for Spacecraft Anomaly Detection Tai Hung Lu, 2022 Space is a challenging environment not only for humans but also for machines Reliably and efficiently detecting anomalies that appear on spacecraft is a key step towards preventing the loss of onboard components the mission or even lives Spacecraft health monitoring practices today mainly rely on prior knowledge of complex systems such as checking if telemetry values fall outside pre established limits Deep learning techniques offer a more data driven solution capable of processing enormous amounts of telemetry and producing valuable insights Several such methods have emerged which learn patterns of nominal behaviour in a semi supervised manner without the need for anomaly labels In this thesis we explore semi supervised deep learning based methods for detecting spacecraft anomalies Inspired by three recent works we examine variations of recurrent neural network architectures which adopt elements of generative adversarial networks and graph attention networks to predict anomaly scores from input sequences of data These models are paired with techniques for calculating anomaly thresholds and then evaluated on a real dataset of Near Earth Object Surveillance Satellite NEOSat telemetry and anomalies Our experiments show that models built with gated recurrent units achieve the best overall performance when combined with Peaks Over Threshold for setting thresholds plus a subsequent anomaly pruning step In addition to detecting almost all of the same anomalies as humans with a manageable false positive rate such models can leverage graph attention layers to produce attention scores as further tools for investigating anomalies

network of Internet enabled devices The concept of IoT is employed in almost all fields such as healthcare smart cities smart grids energy distribution agriculture and even transportation In a typical IoT enabled network smart sensors are geographically distributed to collect and process data within a smart infrastructure using an open channel the Internet However the use of the Internet brings inherent vulnerabilities related to security e g IoT devices can be compromised using advanced hacking techniques and privacy e g adversary performing inference and data poisoning attacks Intrusion Detection System IDS and Cyber Threat Intelligence CTI are the two most extensively used techniques in IoT enabled networks to safeguard the integrity and availability of sensitive smart systems However the presence of a large volume of data i e dimensionality curse and cloud based centralized deployment mechanism hurts the IDS performance in terms of intrusion detection tasks and increased latency for data processing On the other hand modelling CTI is challenging due to the limited labels of cyber threat sources and analysing these sources to extract relevant threat information manually is a time consuming and error prone procedure that necessitates a large investment of resources This thesis provides substantial contributions to research on the building of a distributed IDS a hybrid feature selection approach an automated CTI Modelling and Identification scheme and a deep privacy encoding module for enhancing security and privacy of IoT enabled networks
