Title: GitHub's Battle Against the Largest DDoS Attack

Introduction

GitHub, a platform where developers collaborate on projects, experienced an extraordinary event on Wednesday, February 28, 2018, at around 12:15 pm EST. A massive wave of traffic, 1.35 terabits per second, hit the website, marking the most powerful distributed denial of service (DDoS) attack ever recorded. Surprisingly, this attack did not require a botnet.

The Attack and Initial Response

A DDoS attack is like a digital traffic jam, where a website gets flooded with so much traffic that it can't handle it all, causing it to slow down or even stop working. In this case, GitHub faced a digital storm. For a few minutes, the website struggled with outages, but then it called for help from its DDoS mitigation service, Akamai Prolexic. Prolexic acted as a shield, routing all the traffic coming in and out of GitHub. It sent the data through special cleaning centers to separate and block the bad traffic from the good.

Comparing to Previous Attacks

The attack was significantly larger than a similar attack that happened in 2016 against an internet infrastructure company called Dyn. That attack reached 1.2 terabits per second and caused connectivity issues across the United States. However, this time, the good guys were prepared.

Defending Against the Attack

Akamai defended against the attack in several ways. In addition to Prolexic's general DDoS defense infrastructure, the company had also recently implemented specific defenses for a type of DDoS attack that comes from something called memcached servers. These servers are like digital librarians that help speed up networks and websites by remembering and quickly providing information. However, they're not supposed to be exposed on the public internet, where anyone can access them.

The Role of Memcached Servers

Unfortunately, about 100,000 memcached servers were exposed online without any protection. This meant that an attacker could access them and send them a special command, which the server would respond to with a much larger reply. This is like asking a librarian a simple question and getting a truckload of books in response!

Amplification Attacks

Unlike other DDoS attacks that use botnets (networks of infected computers) to flood websites with traffic, memcached DDoS attacks don't need a botnet. Instead, attackers just pretend to be their victim by using their victim's IP address and send small requests to multiple memcached

by the Universitat der Bundeswehr Munich Germany on the 7-8 July 2016 ECCWS is a recognised event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings, display their work in progress and discuss conceptual and empirical advances in the area of Cyberwar and Cyber Security. It provides an important opportunity for researchers and managers to come together with peers to share their experiences of using the varied and expanding range of Cyberwar and Cyber Security research available to them. With an initial submission of 110 abstracts, after the double-blind peer review process, there are 37 Academic research papers and 11 PhD research papers, 1 Master's research paper, 2 Work In Progress papers and 2 non-academic papers published in these Conference Proceedings. These papers come from many different countries including Austria, Belgium, Canada, Czech Republic, Finland, France, Germany, Greece, Hungary, Ireland, Kenya, Luxembourg, Netherlands, Norway, Portugal, Romania, Russia, Slovenia, South Africa, Sweden, Turkey, UK and USA. This is not only highlighting the international character of the conference but is also promising very interesting discussions based on the broad treasure trove of experience of our community and participants.

Enterprise Risk Management Terje Aven, Shital Thekdi, 2019-12-06 Enterprise Risk Management Advances on its Foundation and Practice relates the fundamental enterprise risk management (ERM) concepts and current generic risk assessment and management principles that have been influential in redefining the risk field over the last decade. It defines ERM with a particular focus on understanding the nexus between risk, uncertainty, knowledge and performance. The book argues that there is a critical need for ERM concepts, principles and methods to adapt to the latest and most influential risk management developments as there are several issues with outdated ERM theories and practices. Problems include the inability to effectively and systematically balance both opportunity and downside performance or relying too much on narrow probability-based perspectives for risk assessment and decision making. It expands traditional loss-based risk principles into new and innovative performance risk frameworks and presents fundamental risk principles that have recently been developed by the Society for Risk Analysis (SRA). All relevant statistical and risk concepts are clearly explained and interpreted using minimal mathematical notation. The focus of the book is centered around ideas and principles more than technicalities. The book is primarily intended for risk professionals, researchers and graduate students in the fields of engineering and business and should also be of interest to executive managers and policy makers with some background in quantitative methods such as statistics.

Narratives of Pedagogical Development and Navigation of Educational Contexts Gierhart, Aaron R., 2025-06-19 Educators continually adapt and grow within the changing landscape of teaching and learning. As they respond to new challenges ranging from policy reforms and technological shifts to diverse classroom dynamics, they craft personal and professional narratives that reflect their pedagogical approaches. These stories reveal how teachers make sense of their experiences, negotiate their roles and strive to meet the needs of their students within complex educational settings. Understanding these journeys may offer valuable insights into the ways educators learn, reflect and transform their

practices Narratives of Pedagogical Development and Navigation of Educational Contexts explores various stories of pedagogy and teaching as a process of growth and change It presents an alternative to traditional views of teaching as a profession examining the social and political forces impacting education and highlighting the realities of teaching amidst various social challenges and political issues This book covers topics such as sociology teacher training and education policy and reform and is a useful resource for educators sociologists policymakers academicians researchers and scientists

EDWARDS,2025 **Countdown to Zero Day** Kim Zetter,2014-11-11 Top cybersecurity journalist Kim Zetter tells the story behind the virus that sabotaged Iran s nuclear efforts and shows how its existence has ushered in a new age of warfare one in which a digital attack can have the same destructive capability as a megaton bomb In January 2010 inspectors with the International Atomic Energy Agency noticed that centrifuges at an Iranian uranium enrichment plant were failing at an unprecedented rate The cause was a complete mystery apparently as much to the technicians replacing the centrifuges as to the inspectors observing them Then five months later a seemingly unrelated event occurred A computer security firm in Belarus was called in to troubleshoot some computers in Iran that were crashing and rebooting repeatedly At first the firm s programmers believed the malicious code on the machines was a simple routine piece of malware But as they and other experts around the world investigated they discovered a mysterious virus of unparalleled complexity They had they soon learned stumbled upon the world s first digital weapon For Stuxnet as it came to be known was unlike any other virus or worm built before Rather than simply hijacking targeted computers or stealing information from them it escaped the digital realm to wreak actual physical destruction on a nuclear facility In these pages Wired journalist Kim Zetter draws on her extensive sources and expertise to tell the story behind Stuxnet s planning execution and discovery covering its genesis in the corridors of Bush s White House and its unleashing on systems in Iran and telling the spectacular unlikely tale of the security geeks who managed to unravel a sabotage campaign years in the making But Countdown to Zero Day ranges far beyond Stuxnet itself Here Zetter shows us how digital warfare developed in the US She

takes us inside today's flourishing zero day grey markets in which intelligence agencies and militaries pay huge sums for the malicious code they need to carry out infiltrations and attacks She reveals just how vulnerable many of our own critical systems are to Stuxnet like strikes from nation state adversaries and anonymous hackers alike and shows us just what might happen should our infrastructure be targeted by such an attack Propelled by Zetter's unique knowledge and access and filled with eye opening explanations of the technologies involved Countdown to Zero Day is a comprehensive and prescient portrait of a world at the edge of a new kind of war

Fancy Bear Goes Phishing Scott J. Shapiro,2023-05-23 Unsettling absolutely riveting and for better or worse necessary reading Brian Christian author of Algorithms to Live By and The Alignment Problem An entertaining account of the philosophy and technology of hacking and why we all need to understand it It's a signal paradox of our times that we live in an information society but do not know how it works And without understanding how our information is stored used and protected we are vulnerable to having it exploited In *Fancy Bear Goes Phishing* Scott J Shapiro draws on his popular Yale University class about hacking to expose the secrets of the digital age With lucidity and wit he establishes that cybercrime has less to do with defective programming than with the faulty wiring of our psyches and society And because hacking is a human interest story he tells the fascinating tales of perpetrators including Robert Morris Jr the graduate student who accidentally crashed the internet in the 1980s and the Bulgarian Dark Avenger who invented the first mutating computer virus engine We also meet a sixteen year old from South Boston who took control of Paris Hilton's cell phone the Russian intelligence officers who sought to take control of a US election and others In telling their stories Shapiro exposes the hackers tool kits and gives fresh answers to vital questions Why is the internet so vulnerable What can we do in response Combining the philosophical adventure of G del Escher Bach with dramatic true crime narrative the result is a lively and

original account of the future of hacking espionage and war and of how to live in an era of cybercrime Includes black and white images **Case Study** Lucian Tipi,2016 This case study is based on a real incident which aims to raise awareness of state sponsored cyber crime
