Chiang Elements Of Dynamic Optimization :

Elements of Dynamic Optimization Alpha C. Chiang, 1992 Designed to be used with Chiang's Fundamental Methods of Mathematical Economics or independently at advanced undergraduate or graduate level this text presents an in depth exploration of dynamic optimization in economics *Foundations of Dynamic Economic Analysis* Michael R. Caputo, 2005-01-17 Foundations of Dynamic Economic Analysis presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory i.e continuous time dynamic economic processes and to interpret dynamic economic behavior The style of presentation with its continual emphasis on the economic interpretation of mathematics and models distinguishes it from several other excellent texts on the subject This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition Accordingly motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem Furthermore such sequencing of the material naturally leads to the development of the primal dual method of comparative dynamics and dynamic duality theory two modern approaches used to tease out the empirical content of optimal control models The stylistic approach ultimately draws attention to the empirical richness of optimal control theory a feature missing in virtually all other textbooks of this type Business Economics and Finance with MATLAB, GIS, and Simulation Models Patrick L. Anderson, 2004-07-27 This book takes recent theoretical advances in Finance and Economics and shows how they can be implemented in the real world It presents tactics for using mathematical and simulation models to solve complex tasks of forecasting income valuing businesses predicting retail sales and evaluating markets and tax and regulatory problems Busine **Lectures on Mathematics for Economic and Financial Analysis** Giorgio Giorgi, Bienvenido Jiménez, Vicente Novo, 2025-03-21 This book offers a comprehensive yet approachable introduction to essential mathematical concepts tailored specifically for undergraduate and first year graduate students in Economics and Social Sciences Based on lectures delivered at the University of Pavia's Department of Economics and Management and also in UNED Department of Applied Mathematics in Madrid it aims to equip students with the mathematical tools necessary to better understand their courses in economics and finance where math is applied directly Unlike texts focused on formalized topics like Mathematical Economics or Operations Research this book presents basic mathematical principles and methods that are immediately relevant to students With a clear accessible approach it includes numerous examples some with economic applications to illustrate key concepts and make them easier to grasp The authors have carefully chosen proofs that are straightforward and beneficial for students to encounter offering an introduction to important proof techniques without overwhelming complexity The book also provides a select bibliography allowing readers to explore topics in greater depth if desired Drawing on years of teaching experience the authors have created a valuable resource that serves as both a foundation and a practical guide for students navigating the mathematical aspects of economics and social science courses

Oligopoly, the Environment and Natural Resources Luca Lambertini, 2013-08-21 Industrial production and consumption patterns rely heavily on the intensive use of both renewable and non renewable resources and the consequences for the environment can be serious Following a long period of time where the profit incentives of firms have prevailed over preservation of the environment and the world's natural resources a new consensus has emerged concerning the need to regulate firm behaviour aimed at ensuring the sustainability of the economic system in the long run This book offers an exhaustive overview of current economic debate about these topics taking modern oligopoly theory as a benchmark The first part of the book covers static models dealing with incentives for green research and development Pigovian taxation cartels environmental quality and international trade as well as the role of corporate social responsibility public firms and consumer environmental awareness as endogenous regulatory instruments Then the author moves on to examine the role of time while drawing from optimal control and differential game theory This opens the way to the discussion of fair discount rates to ensure the welfare of future generations as well as the long run sustainability of production and consumption patterns
