processing and new optimization techniques Logical and Relational Learning Luc De Raedt, 2008-09-27
The term logical and relational learning refers to the subfield of artificial intelligence
machine learning and data mining that is concerned with learning in expressive logical or relational representations. It is the union
of inductive logic programming, statistical relational learning, and multi-relational data mining, which all have contributed
techniques for learning from data in relational form. Even though some early contributions to logical and relational learning
are about forty years old, now it was only with the advent of inductive logic programming in the early 1990s that the field
became popular. Whereas initial work was often concerned with logical or logic programming issues,
the focus has rapidly changed to the discovery of new and interpretable knowledge from structured data, often in the form of rules,
and soon important successes in applications in domains such as bioinformatics and computational linguistics were
realized. Today the challenges and opportunities of dealing with structured data and knowledge have been taken up by the artificial
intelligence community at large and form the motivation for a lot of ongoing research. Indeed, graph network and multi-
relational data mining are now popular themes in data mining, and statistical relational learning is receiving a lot of attention
in the machine learning and uncertainty in artificial intelligence communities. In addition, the range of tasks for which logical
and relational techniques have been developed now covers almost all machine learning and data mining tasks. *AI and
Computing in Industrial Education Handbook* Marcelo V. Garcia, Rommel Santiago Velastegui Hernández, 2025-10-24
This book bridges Industry 4.0 principles with educational innovation, offering groundbreaking approaches that transform learning
environments across diverse contexts. Readers discover practical applications ranging from AI-powered diagnostics to
gamification strategies, all designed to make education more accessible, engaging, and effective. The unique collaboration
between Hispanic American and European researchers brings fresh perspectives to educational technology, organizing
cutting-edge research into six comprehensive sections. What distinguishes this work is its human-centered approach: each
technological advancement connects directly to pedagogical improvement. Educators, researchers, and technology specialists
find value in the book's exploration of solutions like holographic displays, 3D printed prosthetics for STEM education, and
psychological self-assessment platforms. Beyond serving as a reference, this book establishes a foundation for continued cross-
cultural dialogue and future innovation, helping institutions integrate emerging technologies while keeping human
development at the core of educational transformation. **Machine Learning: ECML 2004** Jean-Francois
Boulicaut, 2004-09-07
This book constitutes the refereed proceedings of the 15th European Conference on Machine Learning
ECML 2004 held in Pisa, Italy, in September 2004, jointly with PKDD 2004. The 45 revised full papers and 6 revised short
papers presented together with abstracts of 5 invited talks were carefully reviewed and selected from 280 papers submitted
to ECML and 107 papers submitted to both ECML and PKDD. The papers present a wealth of new results in the area and
address all current issues in machine learning. **Broadband Policies for Latin America and the Caribbean: A Digital**
