accessible introduction to the fundamental programming and problem solving concepts necessary for students at this level. The authors carefully build upon the many important computer science concepts and problem solving techniques throughout the text and offer relevant real world examples and exercises to reinforce key material. Programming skills throughout the text are linked to applied areas such as Image Processing, Cryptography, Astronomy, Music, the Internet, and Bioinformatics, giving students a well rounded look of its capabilities.

Python for Everyone Cay S. Horstmann, Rance D.

Necaise, 2013-03-18 This text is an unbound binder ready edition. Python for Everyone 1st Edition is a comprehensive introduction to Python and computer programming which focuses on the principles of programming, software engineering, and effective learning. It is designed for a one semester mixed major first course in programming. Nobody supports your desire to teach students good programming skills like Cay Horstmann and Rance Necaise. Active in both the classroom and the software industry, Horstmann and Necaise know that meticulous coding, not shortcuts, is the base upon which great programmers are made. Using an innovative visual design that leads students step by step through intricacies of Python programming, Python For Everyone 1st Edition instills confidence in beginning programmers and confidence leads to success.

QGIS Python Programming Cookbook Joel Lawhead, 2017-03-14 Master over 170 recipes that will help you turn QGIS from a desktop GIS tool into a powerful automated geospatial framework. About This Book Delve into the undocumented features of the QGIS API. Get a set of user friendly recipes that can automate entire geospatial workflows by connecting Python GIS building blocks into comprehensive processes. This book has a complete code upgrade to QGIS 2.18 and 30 new valuable recipes. Who This Book Is For This book is for geospatial analysts who want to learn more about automating everyday GIS tasks as well as programmers responsible for building GIS applications. The short reusable recipes make concepts easy to understand and combine so you can build larger applications that are easy to maintain. What You Will Learn Use Python and QGIS to produce captivating GIS visualizations and build complex map layouts. Find out how to effectively use the poorly documented and undocumented features of the QGIS Python API. Automate entire geospatial workflows by connecting Python GIS building blocks into comprehensive processes. Create, import, and edit geospatial data on disk or in memory. Change QGIS settings programmatically to control default behavior. Automatically generate PDF map books. Build dynamic forms for field input. In Detail QGIS is a desktop geographic information system that facilitates data viewing, editing, and analysis. Paired with the most efficient scripting language, Python, we can write effective scripts that extend the core functionality of QGIS. Based on version QGIS 2.18, this book will teach you how to write Python code that works with spatial data to automate geoprocessing tasks in QGIS. It will cover topics such as querying and editing vector data and using raster data. You will also learn to create, edit, and optimize a vector layer for faster queries, reproject a vector layer, reduce the number of vertices in a vector layer without losing critical data, and convert a raster to a vector. Following this, you will work through recipes that will help you compose static maps, create heavily customized maps, and add specialized labels, and

annotations As well as this we ll also share a few tips and tricks based on different aspects of QGIS Style and approach This book follows a recipe based problem solution approach to address and dispel challenges faced when implementing and using QGIS on a regular basis
