Radar Systems Analysis and Design Using MATLAB Bassem R. Mahafza, 2002-01-01 Imagine the ideal radar book What criteria define it Provides a detailed useful reference for working engineers and can serve as an advanced graduate textbook Stands on its own as a complete presentation of the subject Includes examples and exercise problems Helps readers move beyond the theory into the real world of radar design and analysis Radar Systems Analysis and Design Using MATLAB does all this and more Based on the philosophy that radar systems should not be difficult to understand or complicated to analyze and design it focuses on radar fundamentals principles and rigorous but easy to follow derivations Each chapter provides all the necessary mathematical and analytical coverage needed for understanding radar theory Among this book's most outstanding features is the integration of Matlab 5.0 functions and programs within each chapter to further enhance understanding of the theory and provide a source for establishing radar system design requirements All of these functions and programs can be downloaded from the CRC Web site saving users more than 1 000 in acquiring similar software All of this plus nearly 1 300 equations almost 300 illustrations more than 200 examples and end of chapter problems and six appendices means that Radar Systems Analysis and Design Using MATLAB meets all the criteria Your search for the ideal resource for radar engineering is over

MATLAB Simulations for Radar Systems Design Bassem R. Mahafza, Atef Elsherbeni, 2003-12-17 Simulation is integral to the successful design of modern radar systems and there is arguably no better software for this purpose than MATLAB But software and the ability to use it does not guarantee success One must also Understand radar operations and design philosophy Know how to select the radar parameters to meet the design requirements Be able to perform detailed trade off analysis in the context of radar sizing modes of operation frequency selection waveforms and signal processing Develop loss and error budgets associated with the design MATLAB Simulations for Radar Systems Design teaches all of this and provides the M files and hands on simulation experience needed to design

and analyze radar systems Part I forms a comprehensive description of radar systems their analysis and the design process The authors unique approach involves a design case study introduced in Chapter 1 and followed throughout the text As the treatment progresses the complexity increases and the case study requirements are adjusted accordingly Part II presents a series of chapters some authored by other experts in the field on specialized radar topics important to a full understanding of radar systems design and analysis A comprehensive set of MATLAB programs and functions support both parts of the book and are available for download from the CRC Press Web site

Radar Systems Analysis and Design Using MATLAB Third Edition Bassem R. Mahafza, 2013-05-20 Developed from the author s graduate level courses the first edition of this book filled the need for a comprehensive self contained and hands on treatment of radar systems analysis and design It quickly became a bestseller and was widely adopted by many professors The second edition built on this successful format by rearranging and updating topics and code Reorganized expanded and updated Radar Systems Analysis and Design Using MATLAB Third Edition continues to help graduate students and engineers understand the many issues involved in radar systems design and analysis Each chapter includes the mathematical and analytical coverage necessary for obtaining a solid understanding of radar theory Additionally MATLAB functions programs in each chapter further enhance comprehension of the theory and provide a source for establishing radar system design requirements Incorporating feedback from professors and practicing engineers the third edition of this bestselling text reflects the state of the art in the field and restructures the material to be more convenient for course use It includes several new topics and many new end of chapter problems This edition also takes advantage of the new features in the latest version of MATLAB Updated MATLAB code is available for download on the book s CRC Press web page

Radar System Analysis and Modeling David K. Barton, 2004-10-01 A thorough update to the Artech House classic Modern Radar Systems Analysis this reference is a comprehensive and cohesive introduction to radar systems design and performance estimation It offers you the knowledge you need to specify evaluate or apply radar technology in civilian or military systems The book presents accurate detection range equations that let you realistically estimate radar performance in a variety of practical situations With its clear easy to understand language you quickly learn the tradeoffs between choice of wavelength and radar performance and see the inherent advantages and limitations associated with each radar band You find modeling procedures to help you analyze enemy systems or evaluate radar integrated into new weapon systems The book covers ECM and ECCM for both surveillance and tracking to help you estimate the effects of active and passive ECM select hardware software for reconnaissance or jamming and plan the operation of EW systems As radar systems evolve this book provides the equations needed to calculate and evaluate the performance of the latest advances in radar technology
