A Method for Dynamic Reconfiguration of a Cognitive Radio System ,2006 Advances in process technology has made it possible to migrate applications that were traditionally implemented in custom silicon to general purpose processors This transition has given birth to the field of cognitive and software defined radio C SDR These C SDRs offer a broad range of opportunities for improving the use and utilization of radio frequency spectrum This includes the creation of radio networks that can reconfigure their operation based on application requirements policy updates environmental conditions and the ability to adapt to a wide range of protocols One of the key benefits of having a C SDR is its ability to change communication parameters in response to changes in application needs and or changes in the radio frequency landscape Such

reconfiguration requires an understanding of how these communication parameters interact within the network protocol stack Analysis of these parametric cross layer interactions is a critical precursor in the development of a predictive model and algorithm for dynamic reconfiguration of a C SDR This work investigates how parameters at the physical data link network and application layers interact how desirable configurations of these parameters can be determined and how these parameters affect the performance of file transfer and Voice over IP applications An analysis of varying communication parameters across networking layers is used to inform the design implementation and evaluation of a predictive model and algorithm for dynamic reconfiguration of a cognitive radio This model and algorithm allow a C SDR to dynamically modify its configuration in order to improve system performance A systematic method for development of a cognitive platform is presented This method uses statistical analysis of variance and design of experiments techniques to inform the design and implementation of a dynamic reconfiguration algorithm

Cognitive Radio Mobile Ad Hoc Networks F. Richard Yu,2011-09-28 Cognitive radios CR technology is capable of sensing its surrounding environment and adapting its internal states by making corresponding changes in certain operating parameters CR is envisaged to solve the problems of the limited available spectrum and the inefficiency in the spectrum usage CR has been considered in mobile ad hoc networks MANETs which enable wireless devices to dynamically establish networks without necessarily using a fixed infrastructure The changing spectrum environment and the importance of protecting the transmission of the licensed users of the spectrum mainly differentiate classical MANETs from CR MANETs The cognitive capability and re configurability of CR MANETs have

opened up several areas of research which have been explored extensively and continue to attract research and development. The book will describe CR MANETs concepts, intrinsic properties and research challenges of CR MANETs. Distributed spectrum management functionalities such as spectrum sensing and sharing will be presented. The design optimization and performance evaluation of security issues and upper layers in CR MANETs such as transport and application layers will be investigated.

Implementing Software Defined Radio Eugene Grayver, 2012-07-20. Software Defined Radio makes wireless communications easier, more efficient and more reliable. This book bridges the gap between academic research and practical implementation. When beginning a project, practicing engineers, technical managers and graduate students can save countless hours by considering the concepts presented in these pages. The author covers the myriad options and trade offs available when selecting an appropriate hardware architecture. As demonstrated here, the choice between hardware and software centric architecture can mean the difference between meeting an aggressive schedule and bogging down in endless design iterations. Because of the author's experience overseeing dozens of failed and successful developments, he is able to present many real life examples. Some of the key concepts covered are: Choosing the right architecture for the market, laboratory, military or commercial; Hardware platforms, FPGAs, GPPs, specialized and hybrid devices; Standardization efforts to ensure interoperability and portability; State of the art components for radio frequency, mixed signal and baseband processing. The text requires only minimal knowledge of wireless communications; whenever possible, qualitative arguments are used instead of equations. An appendix provides a quick overview of wireless communications and introduces most of the concepts the readers will need to take advantage of the material. An essential introduction to SDR, this book is sure to be an invaluable addition to any technical bookshelf.

Cognitive Radio. Future of Wireless Communication Pragnesh Patel, Snehal Patel, 2015-04-30. Scientific Essay from the year 2015 in the subject Communications. Technical Communication language. English abstract. This Paper describes the shortage of Radio Spectrum that the world is facing today. The solution to this problem is cognitive radio. Cognitive radio and its benefits are explained here. Increase in demand of something is good for mankind as it shows their economic development. But there is a natural resource which creates problems whenever there is increase in demand. That resource is radio spectrum and technology to deal with is this problem is called as cognitive radio. Cognitive radio is been developed under DARPA XG. Cognitive radio is next generation technology in which wireless communicators can use spectrum that is allotted to someone for commercial use under certain restrictions. Section I introduces with the problems faced for spectrum and Cognitive radio and Cognitive Radio Networks are described in Section II and Section III respectively. Section IV deals with Spectrum Assignment and related problems whereas Spectrum Sensing techniques are addressed in Section V. Section VI discusses Applications of Cognitive Radio and we finally conclude in Section VII.
