Endocrine Reproductive Physiology Patrick Eggena, Mount Sinai Medical Center (New York, N.Y.), 1996

Reproductive Endocrinology P. Jorge Chedrese, 2009-06-13 Molecular biology emerged from advances in biochemistry during the 1940s and 1950s when the structure of the nucleic acids and proteins were elucidated Beginning in the 1970s with nucleic acid enzymology and the discovery of the restriction enzymes the tools of molecular biology became widely available and applied in cell biology to study how genes are regulated This new knowledge impacted endocrinology and reproductive biology since it was largely known that the secretion of the internal glands affected the phenotypes and expression of genes Modern reproductive biology encompasses every level of biological study from genomics to ecology encompassing cell biology biochemistry endocrinology and general physiology All of these disciplines require a basic knowledge both as a tool and as an essential aid to a fundamental understanding of the principles of life in health and disease Overall molecular biology is central to scientific studies in all living matter impacting disciplines such as medicine related health sciences veterinary agriculture and environmental sciences In this book the basic biochemistry of nucleic acids and proteins are reviewed Methodologies used to study signaling and gene regulation in the endocrine reproductive system are also discussed Topics include mechanisms of hormone action and several endocrine disorders affecting the reproductive system Professionals in the medical veterinary and animal sciences fields will find exciting and stimulating material enhancing the breadth and quality of their research

Autocrine and Paracrine Mechanisms in Reproductive Endocrinology L. Krey, 2013-11-11 There is a provision in the charter of each Study Section of the Division of Research Grants at the National

Institutes of Health that stipulates that workshops are to be held periodically to aid Study Section members in their appraisals of recent developments in their fields and to identify future challenges worthy of investigation The Reproductive Endocrinology Study Section was established on December 13 1985 to review research grants and research training activities relating to reproductive endocrinology including aspects of management of reproductive endocrine disorders and hormonal imbalances as related to infertility and during pregnancy and puberty breast cancer and prostate cancer It held its first workshop entitled Autocrine and Paracrine Mechanisms in Reproductive Endocrinology in October 1988 in Shrewsbury MA at The Worcester Foundation for Experimental Biology The proceedings of this workshop which are detailed herein reflect the fact that autocrine and paracrine interactions are rapidly being accepted as an exciting area of research by scientists investigating the physiological and biochemical mechanisms of hormone action in the male and female reproductive systems The material covered is novel and wide ranging extending from theoretical considerations of mechanisms of growth factor action and the role of cell cycle stage in determining hormone action to investigations of autocrine and paracrine interactions during development to discussions of the potential clinical ramifications of the basic research findings Such an extensive inventory is necessary for two reasons Yen & Jaffe's Reproductive Endocrinology E-Book Jerome F.
