**Environmental Risks and Challenges of Anthropogenic Metals Flows and Cycles** E. van der Voet,2013 A key question that relates to the very broad and intensive use of metals is whether

society needs to be concerned about long term supplies of any or many of them This is a many faceted question that cannot be answered quickly or unequivocally To address it the Global Metal Flows Working Group envisions a series of six reports of which this is the third one addressing environmental risks and challenges of anthropogenic metals flows and cycles This report compiled by a group of international experts focuses on the impact of metals on the environment as well as on their life cycle energy use Currently primary metals production is responsible for 7 8% of the total global energy use as well as for severe local environmental impacts The report suggests to apply best available techniques and to increase recycling of metals which not only requires significantly less energy per kg metal produced than primary production but also helps decreasing the overall local impacts of mining However even if recycling rates are increased rising global demand for many metals will remain a huge environmental challenge in the next decades worldwide Page 4 of cover Essential Environment Jay Withgott, Scott R.
