Engineering Design Dieter:

Engineering Design George E. Dieter, George Ellwood Dieter, Linda C. Schmidt, 2012 Dieter's Engineering Design represents a major update of this classic textbook for senior design courses. As in previous editions, Engineering Design provides a broader overview of topics than most design texts and contains much more prescriptive guidance on how to carry out design. Dieter focuses on material selection as well as how to implement the design process. Engineering Design provides the senior mechanical engineering students with a realistic understanding of the design process. It is written from the viewpoint that design is the central activity of the engineering profession and it is more concerned with developing attitudes and approaches than in presenting design techniques and tools.

Engineering Design George Dieter, Linda Schmidt, 2009 Dieter's Engineering Design 4e represents a major update of this classic textbook for senior design courses. As in previous editions, Engineering Design provides a broader overview of topics than most design texts and contains much more prescriptive guidance on how to carry out design. Dieter focuses on material selection as well as how to implement the design process. Engineering Design provides the senior mechanical engineering students with a realistic understanding of the design process. It is written from the viewpoint that design is the central activity of the engineering profession and it is more concerned with developing attitudes and approaches than in presenting design techniques and tools. Engineering Design provides a realistic understanding of the engineering design process. The book presents in detail Chapters 1 through 9 an eight-step process that gives prescriptive guidance to the student from problem definition through detail design. Chapters 10 through 16 present more specific treatment of speciality topics: design for X. The text is intended to be used in either a junior or senior engineering course with an integrated hands-on design project.

Engineering Design George E. Dieter, 2000 The third edition of Engineering Design represents a major reorganization and expansion. The revision has resulted from the recognition that engineering students need more structure to guide them through the design process. Chapters have been reordered to be more in the natural progression of the design process. The book is broader in content than most design texts but now contains much more prescriptive guidance on how to carry out design.

Support for the conceptual design stage of effective and resource-efficient offerings Sergio Brambila, 2020-10-20 Human activities in the form of production and consumption have increased to an all time high In many cases this increase has resulted in environmental problems such as waste and pollution that in turn affect our health and way of living Societies have proposed different measures to address such environmental

problems These range from different waste treatment technologies to alternative business models policy measures and lifecycle thinking in the design of products to mention but a few In this research the focus is on supporting early design activities of what is often called the conceptual design stage with the objective to provide effective and resource efficient offerings The early design activities considered here are planning analysis and evaluation Design researchers have largely supported these three activities with a variety of methods and tools However previous research has shown that design support coming from academia has had a low uptake in industry In this regard the aim of this research is to propose not only useful but also usable support for design practitioners during the conceptual design stage This research is carried out in the manufacturing sector in Sweden where selected companies expressed an interest in collaborating with academia to address more thoroughly effective and resource efficient offerings To better match company needs and research from academia this research took a pragmatic and cross disciplinary approach This research approach along with literature reviews semi structured interviews workshops and questionnaires shows different ways in which support can be made more useful and usable The main gap addressed here is that the knowledge and the related skills of the user of the support have not been sufficiently explored The results include requirements of the user of the support proposed methods and tools derived from the requirements identified and most importantly the knowledge and skills needed by the user of the support The main message of this research is that support could be expanded from methods and tools to include knowledge and skills needed by design practitioners the users of support The flow of support from academia to industry could also be reinforced in a two way flow through a pragmatic and cross disciplinary approach to first and foremost address design practitioners needs

Product Platform and Product Family Design Timothy W.

Simpson, Zahed Siddique, Roger Jianxin Jiao, 2006-03-20 Designing products and product families so they may be customized for the global marketplace and achieving these goals in abbreviated time period while maintaining production efficiencies are the keys to successful manufacturing operations The research on these areas has matured rapidly over the last decade Today's highly competitive and volatile marketplace is reshaping the way many companies do business as rapid innovation and mass customization offer a new form of competitive advantage In response companies like Sony Black and Decker and Kodak have successfully implemented strategies to design and develop an entire family of products to satisfy a wide variety of customer requirements Product Platform and Product Family Design Methods and Applications discusses how product platform and product family design can be used successfully to increase variety within a product line shorten manufacturing lead times reduce overall costs within a product line The material available here will serve as both a reference and a hands on guide for practitioners involved in the design planning and production of products Included are real life case studies that explain the benefits of platform based product development

Early stages of designing resource-efficient offerings Sergio

Brambila-Macias, 2018-01-17 The increasing use of natural resources and the pollution it causes calls for new ways of addressing customer needs Additionally a more uncertain and complex world also presents new challenges In this thesis these new challenges are tackled through inter and transdisciplinary research which require more interaction across disciplines to tackle complex phenomena The manner in which companies address customer needs starts from the designing a multiple stakeholder perspective of offerings where companies rely on different types of support guidelines standards methods and tools In this thesis these offerings include products services systems and solutions This plays an important role in the use of natural resources and its impact on the environment In this Licentiate I present results to show initial cues on how to design resource efficient offerings and more specifically their analysis and evaluation in the early stages of the design process This type of offerings is suggested to be crucial for the circular economy which can be understood as a paradigm shift towards sustainability In this paradigm shift designing is carried out by taking into account reuse remanufacture and recycling of products as strategies by multiple stakeholders and companies Other strategies include providing services a function or a solution through dematerialization and transmaterialization The methods used in this research are narrative and systematic literature reviews thematic analysis and a case study The results show a lack of interdisciplinary research in

the academic literature in subjects relevant to the design of resource efficient offerings The results also show a need to clarify what transdisciplinary research entails Moreover current practice shows that support used by companies needs to consider several factors for it to be useful for example the vision of the company participation of potential users of the support and everyday operations among other characteristics Finally more practical support coming from academia is necessary to improve its use in industry Outlines & Highlights for Engineering Design by George E.
