The Engineering of Foundations SALGADO.,2007-01-16 **Design and Performance Verification of UHPC Piles for Deep Foundations** Thomas L. Vande Voort,Muhannad T. Suleiman,Sri Sritharan,2008 The strategic plan for bridge engineering issued by AASHTO in 2005 identified extending the service life and optimizing structural systems of bridges in the United States as two grand challenges in bridge engineering with the objective of producing safer bridges that have a minimum service life of 75 years and reduced maintenance cost Material deterioration was identified as one of the primary challenges to achieving the objective of extended life In substructural applications e g deep foundation construction materials such as timber steel and concrete are subjected to deterioration due to environmental impacts Using innovative and new materials for foundation applications makes the AASHTO objective of 75 years service life achievable Ultra High Performance Concrete UHPC with compressive strength of 180 MPa 26 000 psi and excellent durability has been used in superstructure applications but not in geotechnical and foundation applications This study explores the use of precast prestressed UHPC piles in future foundations of bridges and other structures An H shaped UHPC section which is 10 in 250 mm deep with weight similar to that of an HP 10x57 steel pile was designed to improve constructability and reduce cost In this project instrumented UHPC piles were cast and laboratory and field tests were conducted Laboratory tests were used to verify the moment curvature response of UHPC pile section In the field two UHPC piles have been successfully driven in glacial till clay soil and load tested under vertical and lateral loads This report provides a complete set of results for the field investigation conducted on UHPC H shaped piles Test results durability drivability and other material advantages over normal concrete and steel indicate that UHPC piles are a viable alternative to achieve the goals of AASHTO strategic plan

Modern Geotechnical Design Codes of Practice Patrick Arnold, Michael A. Hicks, Timo Schweckendiek, Brian Simpson, 2012-12-15 The ground is one of the most highly variable of engineering materials It is therefore not surprising that geotechnical designs depend on local site conditions and local engineering experience Engineering practices relating to investigation and design methods site understanding and to safety levels acceptable to society will therefore vary between different regions The challenge in geotechnical engineering is to make use of worldwide geotechnical experience established over many years to aid in the development and harmonization of geotechnical design codes Given the significant uncertainties involved empiricism and engineering judgment will undoubtedly always be an essential element of geotechnical design However rigorous and scientific approaches based on probability theory are finding increased attention in the calibration of modern geotechnical codes of practice and these codes can and should be used to aid fundamental engineering judgment Containing contributions on Code Implementation Code Application and Code Development this book provides a single resource that code developers practitioners and researchers can use to understand the different choices made by national code developers around the world Furthermore the book highlights some of the key challenges faced worldwide concerning the ongoing process of harmonizing geotechnical design code specifications
