**Environmental Engineering IV** Artur Pawlowski, Marzenna R. Dudzinska, Lucjan Pawlowski, 2013-05-21 Environmental engineering has a leading role in the elimination of ecological threats and deals in brief with securing technically the conditions which create a safe environment for mankind to live in. Due to its interdisciplinary character it can deal with a wide range of technical and technological problems. Since environmental engineering uses the knowledge of the basic sciences biology chemistry biochemistry and physics it is able to neutralise pollution in all the elements of the environment i.e. the hydrosphere atmosphere and lithosphere. Moreover environmental engineering deals with the design and maintenance of systems of water supply sewage disposal heating ventilation and air conditioning in buildings. Environmental Engineering IV contains 77 peer reviewed papers selected from 527 presented at the 4th Congress of Environmental Engineering Lublin Poland 25 September 2012. The contributions are divided into 7 chapters: Water supply Water and wastewater treatment Neutralization of solid wastes and sludge Air protection and quality Indoor microclimate Energy Biology and technology. Environmental Engineering IV assesses the state of scientific research in various areas of environmental engineering evaluates the organizational technical and technological progress made in contributing to ecological security and determines the place of environmental engineering in sustainable development taking into account current political and economic conditions and is a valuable source of information for the environmental engineering professional and academic community.

Economics and Engineering of Unpredictable Events Caterina De Lucia, Dino Borri, Atif Kubursi, Abdul Khakee, 2022-03-07

In recent decades the intensification of unpredictable events including the Covid 19 outbreak Brexit trade warfare religion inspired terrorism and civil wars and climate change has resulted in serious loss of human lives and property a decrease in biodiversity and natural hazards with long term negative impacts on environment and impeded social and economic development. Economics and Engineering of Unpredictable Events Modelling Planning and Policies provides an integrated view of the management of unpredictable events incorporating three major perspectives economic management environmental planning and engineering models. Contributors from economics planning regional science and engineering address key questions including: How resilient are human societies and their habitats? What should societies do to shift from being vulnerable to being more resilient? And what role should planning and policies play to protect communities and the natural environment? The chapters cover academic debates conceptual reflections case studies methods and strategy development with particular reference to mitigation and adaptation in face of unpredictable events. This book is of particular interest to readers of economic policy urban and regional planning and engineering.
