Funicular Structures Damon Bolhassani,2025-04-16 Funicular structures are structural skeletons designed using methodologies that analyze the flow and direction of forces which can be categorized as compression tension or a combination of both They are not only elegant resembling naturally occurring forms but also highly efficient and can be built with minimal use of relatively low strength materials thus minimizing their negative environmental impact This book presents an in depth overview of the theoretical foundations and practical methods of designing funicular structures for maximum efficiency Beginning with a foundation and introduction to funicular structures for those new to the subject the book then provides in depth coverage of cables arches shells and vaults domes and spatial structures Chapters explain the theory behind funicular structures in 2D spatial funicular structures in 3D and examine their structural behavior Recent and historically famous structures from around the globe are analyzed and their potential design methods revealed through step by step visual explanations Structural analysis of funicular structures in different forms are also presented to demonstrate pitfalls and common errors Tracing the various methods of designing funicular structures including the latest computational tools this book provides a solid foundation for students of architecture structural design civil engineering landscape design and environmental design to embark on their own funicular design projects □□□□ □□□,2006

The Cumulative Book Index ,1930 The United States Catalog ,1906 **The American Catalog** ,1896 *Theory of Gyroscopic Effects for Rotating Objects* Ryspek Usubamatov,2020-08-29 This book highlights an analytical solution for the dynamics of axially symmetric rotating objects It also presents the theory of gyroscopic effects explaining their physics and using mathematical models of Euler s form for the motion of movable spinning objects to demonstrate these effects The major themes and approaches are represented by the spinning disc and the action of the system of interrelated inertial torques generated by the centrifugal common inertial Coriolis forces as well as the change in their angular momentum These torques constitute the fundamental principles of the mechanical gyroscope theory that can be used for any rotating objects like rings cones spheres paraboloids and propellers of different designs Lastly the mathematical models for the gyroscopic effects are validated by practical tests
