Data Science Careers, Training, and Hiring Renata Rawlings-Goss,2019-08-02 This book is an information packed overview of how to structure a data science career a data science degree program and how to hire a data science team including resources and insights from the authors experience with national and international large scale data projects as well as industry academic and government partnerships education and workforce Outlined here are tips and insights into navigating the data ecosystem as it currently stands including career skills current training programs as well as practical hiring help and resources Also threaded through the book is the outline of a data ecosystem as it could ultimately emerge and how career seekers training programs and hiring managers can steer their careers degree programs and organizations to align with the broader future of data science Instead of riding the current wave the author ultimately seeks to help professionals programs and organizations alike prepare a sustainable plan for growth in this ever changing world of data The book is divided into three sections the first Building Data Careers is from the perspective of a potential career seeker interested in a career in data the second Building Data Programs is from the perspective of a newly forming data science degree or training program and the third Building Data Talent and Workforce is from the perspective of a Data and Analytics Hiring Manager Each is a detailed introduction to the topic with practical steps and professional recommendations The reason for presenting the book from different points of view is that in the fast paced data landscape it is helpful to each

group to more thoroughly understand the desires and challenges of the other It will for example help the career seekers to understand best practices for hiring managers to better position themselves for jobs It will be invaluable for data training programs to gain the perspective of career seekers who they want to help and attract as students Also hiring managers will not only need data talent to hire but workforce pipelines that can only come from partnerships with universities data training programs and educational experts The interplay gives a broader perspective from which to build

Data Science Ajit Roy, Prof Ajit Kumar Roy, 2016-03-14 Presently scientists engineers educators citizens and decision makers have unprecedented amounts and types of data available to them Data generates from many sources including scientific instruments medical devices telescopes microscopes satellites digitally authored media text images audio and emails streaming data from weblogs videos financial and data enabled discovery processes Therefore attention is given on the computational mathematical and statistical methods for data analysis and visualization techniques for making sense of the data Data Science is an applied activity and data scientists serve the needs and solve the problems of data users Data Science is a flourishing industry Countries and companies around the world are continuously experiencing a rush in the amount of data collected They are determined to hire experts who can work on their data and improve their lives Such experts are known by many names and most popular is Data Scientist Thomas Davenport and D J Patil brought the data scientist into the national spotlight terming Data Scientist The Sexiest Job of the 21st Century Data Scientists are in high demand There is simply not enough talent to fill the jobs According to expert opinion to become a data scientist you need is to have enough baseline knowledge and experience and the skill to constantly adapt and learn Boot camps are the perfect medium for making the transition Data science is big landscape and self learning is the necessary skill if anyone wants to become a good data scientist MOOCs had been Major source of treasure for the data scientist You can search through this exhaustive list of courses duly reviewed by experts and documented in the book entitled *Data Science A Career Option for 21st Century* The book is broadly compiled with the following seven chapters and within each chapter there are many points to get the answers of the key questions that are likely to come from the aspiring Data Scientists Chapter 1 Basic Concept about Data and Data Science Chapter 2 Comparison among Data Scientist and Other Analytic Disciplines Chapter 3 Skill Requirement for Data Scientist s Job Chapter 4 Data Science Courses Offered by Educational Institutions Chapter 5 Big Data Trends Predictions and Growth in the Next 12 Months 2016 Chapter 6 Modeling Related to Data Science Chapter 7 Career Outlook for Data Science Professionals Besides the book contains web addresses links tutorials video blog posts that will guide one to the right direction to learn and equip oneself to become a successful Data Scientist The book is an ideal read for budding data scientists who are just getting started in the field This book will give you the knowledge and insights you need to hit the ground running in this fast growing field This is an essential Perfect for the aspiring data scientists Every data science job seeking candidate should understand the fundamentals presented in this book The demand for Analytics skill is

going up steadily globally but there is a huge deficit on the supply side In spite of Big Data Analytics being a Hot job there are still a large number of unfilled jobs across the globe due to shortage of required skill This reflects the increasing demand for sophisticated data analysis skills combining computer programming with statistics and the growth in the popularity of the term data science A McKinsey Global Institute study states that the US will face a shortage of about 190 000 data scientists and 1.5 million managers and analysts who can understand and make decisions using Big Data by 2018 India currently has the acute scarcity of data analytics talent and demand for talent is expected to be on the higher side as more global organizations are outsourcing their work *Careers in Data Science* Institute for Career Research,2020-03-30

DATA SCIENTISTS HAVE A FASCINATING JOB

They are the invaluable professionals that know what to do with the mountains of information that is being created and gathered from every corner of the world every single minute of the day In this highly digitized world today everyone seems to have an urgent need to do something with all the Big Data for fear of missing out on something Businesses from banks to car manufacturers depend on data scientists to help them make important decisions that will bolster their bottom line and edge out the competition Government agencies at all levels use their findings to make important policy changes Even nonprofit organizations depend on data scientists to help them improve the lives of countless people It is a challenging job to take an enormous pile of information and distill it into something useful There is simply too much information for the average person to process and use It is the data scientist's mission to analyze data for actionable insights but theirs is no easy task Using a combination of math statistics and programming skills data scientists are able to compile organize clean and interpret any number of data points They then use their expert analytic skills to uncover hidden solutions that can be applied to a wide range of purposes It takes some rigorous education to become an effective data scientist They need to become expert programmers using tools like Python SQL R and Scala They need cutting edge skills in machine learning data visualization artificial intelligence modeling and optimization They have to be expert in using Excel Most data science professionals have graduate degrees either a master's or PhD in data science statistics computer science or mathematics Data scientists come from a wide range of educational backgrounds though some technical training is always necessary For example those educated in business or human behavior can offer unique perspectives that allow them to arrive at more accurate and relevant conclusions There is a wide array of opportunities for professionals with the advanced skills and know how to work in data science roles The demand is high now well above the national average and the trend is zooming upward Over the next few years the analytics market is expected to grow by leaps and bounds until it is at least one third of the global IT market Organizations of all kinds are scrambling to integrate data science into their business processes Although the demand is rising steadily there is a huge deficit on the supply side of qualified employees creating excellent prospects for future data scientists Those in the field can look forward to a promising job market and longevity and there is more good news as well Data scientists enjoy excellent compensation for their work with a median income of almost 100 000

and the potential to earn 250 000 a year The pay really stands out as an attractive feature plus there are also reports of high job satisfaction No wonder data scientist has been voted the Best Job in America four years in a row **Data Science Job** Przemek Chojecki,2020-01-29 We re living in a digital world Most of our global economy is digital and the sheer volume of data is stupendous It s 2020 and we re living in the future Data Scientist is one of the hottest job on the market right now Demand for data science is huge and will only grow and it seems like it will grow much faster than the actual number of data scientists So if you want to make a career change and become a data scientist now is the time This book will guide you through the process From my experience of working with multiple companies as a project manager a data science consultant or a CTO I was able to see the process of hiring data scientists and building data science teams I know what s important to land your first job as a data scientist what skills you should acquire what you should show during a job interview *Science and Engineering Careers in the United States* Richard B. Freeman,Daniel L. Goroff,2009-08-01 Beginning in the early 2000s there was an upsurge of national concern over the state of the science and engineering job market that sparked a plethora of studies commission reports and a presidential initiative all stressing the importance of maintaining American competitiveness in these fields *Science and Engineering Careers in the United States* is the first major academic study to probe the issues that underlie these concerns This volume provides new information on the economics of the postgraduate science and engineering job market addressing such topics as the factors that determine the supply of PhDs the career paths they follow after graduation and the creation and use of knowledge as it is reflected by the amount of papers and patents produced A distinguished team of contributors also explores the tensions between industry and academe in recruiting graduates the influx of foreign born doctorates and the success of female doctorates *Science and Engineering Careers in the United States* will raise new questions about stimulating innovation and growth in the American economy **Careers in Data Science** ,2019 **Data Science for Undergraduates** National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Science Education,Division on Engineering and Physical Sciences,Committee on Applied and Theoretical Statistics,Board on Mathematical Sciences and Analytics,Computer Science and Telecommunications Board,Committee on Envisioning the Data Science Discipline: The Undergraduate Perspective,2018-11-11 Data science is emerging as a field that is revolutionizing science and industries alike Work across nearly all domains is becoming more data driven affecting both the jobs that are available and the skills that are required As more data and ways of analyzing them become available more aspects of the economy society and daily life will become dependent on data It is imperative that educators administrators and students begin today to consider how to best prepare for and keep pace with this data driven era of tomorrow Undergraduate teaching in particular offers a critical link in offering more data science exposure to students and expanding the supply of data science talent *Data Science for Undergraduates Opportunities and Options* offers a vision for the emerging discipline of data science at the undergraduate level This report

outlines some considerations and approaches for academic institutions and others in the broader data science communities to help guide the ongoing transformation of this field
