These are the notes for the first lecture. The notes on Cooling Theory. These are generalised and give insights on problems for all of the cooling gases. Some are the generalised, while some are the specific, the latter contribution to Cooling Theory and the book of Cooling and Heat Production of Free-Electron Lasers. I also used several other sources for additional material. Some are in Part II course book of Cooling in Cooling Theory and Synchrotron light for Particle Data Book, and the other source is from a Cambridge book on Subatomic Particles. The notes are given by Professor Tim Stoen. I also included some from the book of the first lecture, Applied Math for the Free Neutronium. The last source of the notes is from the book of the first lecture, Applied Math for the Free Neutronium. The last source of the notes is from the book of the first lecture, Applied Math for the Free Neutronium.
