Structural Steel Design to Eurocode 3 and AISC Specifications Claudio Bernuzzi, Benedetto Cordova, 2016-05-02

Structural Steel Design to Eurocode 3 and AISC Specifications deals with the theory and practical applications of structural steel design in Europe and the USA. The book covers appropriate theoretical and background information followed by a more design oriented coverage focusing on European and United States specifications and practices allowing the reader to directly compare the approaches and results of both codes. Chapters follow a general plan covering a general section covering the relevant topics for the chapter based on classical theory and recent research developments. A detailed section covering design and detailing to Eurocode 3 specification. A detailed section covering design and detailing to AISC specifications. Fully worked examples using both codes are presented. With construction companies working in increasingly international environments, engineers are more and more likely to encounter both codes. Written for design engineers and students of civil and structural engineering, this book will help both groups to become conversant with both code systems.

Overhead Power Lines Friedrich Kiessling, Peter Nefzger, Joao Felix Nolasco, Ulf Kaintzyk, 2014-07-11. *Overhead Power Lines* presents not only the scientific and engineering basis for the electric and mechanical design but also comprehensively describes all aspects of most recent technology including the selection and design of components such as conductors, insulators, fittings, supports, and foundations. The chapters on line survey, construction, and maintenance address updated requirements and solutions. Reflecting the changing economic and technical environment of the industry, this publication introduces beginners to the full range of relevant topics of line design and implementation and serves as a valuable reference to engineers and technicians employed by overhead line operators, contractors, and consulting companies. This first English language edition, based on the 5th German language edition, incorporates the latest international standards edited by IEC CENELEC Cigr, the International Council of Large Electric Systems, in which the authors have long participated in and contributed to.

Hot-Dip Galvanizing of Steel Structures Vlastimil Kuklik, Jan Kudlacek, 2016-02-09. *Hot Dip Galvanizing of Steel Structures* contains practical information that is useful for both researchers in hot dip galvanizing and engineers, designers, and inspectors. The book draws from the empirical experience and research of the authors, complementing the current state of knowledge of morphological variations of the coating and causes of coating delamination. The book includes chapters devoted to qualitative tests of the coating and to methods of making corrections. A section describing the principle of protecting steel against corrosion through zinc coating is also provided, along with an extensive chapter on the principles of good design for hot dip galvanizing. The chapter related to the safety of hot dip galvanized steel structures offers a new hypothesis about the mechanism of nucleation of LMAC cracks during hot dip galvanizing, thus enriching the knowledge regarding this phenomenon. Provides practical information on hot dip galvanizing from a scientific disciplinary perspective, including coverage of design principles, reliability of galvanized structures, and legal aspects. Features chapters devoted to qualitative

assessments of the surface treatment and methods for correcting problems Includes discussion of hot dip galvanizing with regard to environmental aspects and sustainable development

Encyclopedia of Architectural Technology Jacqueline Glass, 2002-04-03. Constant technological advancements are opening up dramatic new possibilities for the built form at the same time architects are developing innovative designs which require new techniques to make these ideas reality. The *Encyclopedia of Architectural Technology* is the first book to specifically address these two issues by providing a comprehensive reference to modern architectural technologies encompassing all key aspects of construction, structures, environmental design, and servicing. The *Encyclopaedia* features over 180 entries ranging from materials and techniques to notable innovators in architecture and engineering. Each entry includes a brief quick reference summary followed by a more detailed text and suggestions for further reading. Besides technological terms, entries are included on related topics such as sick building syndrome and sustainability. Key engineers Ove Arup and Ted Happold have dedicated entries, as do a range of ground-breaking architects such as Le Corbusier, Norman Foster, Walter Gropius, Herzog de Meuron, Oscar Niemeyer, Richard Rogers, Carlo Scarpa, Frank Lloyd Wright, Ken Yeang, and many others. *PN-EN ISO 14713-1* Polska.
