Scientific Group on the Biology of Human Reproduction (WORLD HEALTH ORGANIZATION),1964 **How We Do It** Robert Martin,2013-06-11 Despite the widespread belief that natural is better when it comes to sex pregnancy and parenting most of us have no idea what natural really means the origins of our reproductive lives remain a mystery Why are a quarter of a billion sperm cells needed to fertilize one egg Are women really fertile for only a few days each month How long should babies be breast fed In *How We Do It* primatologist Robert Martin draws on forty years of research to locate the roots of everything from our sex cells to the way we care for newborns He examines the procreative history of humans as well as that of our primate kin to reveal what's really natural when it comes to making and raising babies and distinguish which behaviors we ought to continue and which we should not Although it's not realistic to raise our children like our ancestors did Martin's investigation reveals surprising consequences of and suggests ways to improve upon the way we do things now For instance he explains why choosing a midwife rather than an obstetrician may have a greater impact than we think on our birthing experience examines the advantages of breast feeding for both mothers and babies and suggests why babies may be ready for toilet training far earlier than is commonly practiced *How We Do It* offers much needed context for our reproductive and child rearing practices and shows that once we understand our evolutionary past we can consider what worked what didn't and what it all means for the future of our species

The Biology of Human Reproduction J. J. Head, John Juan Head, Cynthia Clarke, 1979 **Biology of Human Reproduction** World Health Organization, 1964-01-01 *The Biodemography of Human Reproduction and Fertility* Joseph Rodgers, Hans-Peter Kohler, 2002-09-30 The book that you hold in your hands is the second in a series The two titles in the series are the following Genetic Influences on Human Fertility and Sexuality Theoretical and Empirical Contributions from the Biological and Behavior Sciences Edited by Joseph Lee Rodgers David C Rowe Warren B Miller Published by Kluwer Academic Press 2000 The Biodemography of Human Reproduction and Fertility Edited by Joseph Lee Rodgers Hans Peter Kohler Published by Kluwer Academic Press 2002 The series has published chapters by researchers who study human fertility from a particular perspective Biodemography We welcome your interest and participation in this developing subfield Or perhaps biodemography may be better referred to as a superfield Because biodemography so naturally crosses interdisciplinary boundaries and because its application draws together researchers from disparate disciplines it may well be more appropriate to consider that biodemography subsumes a number of other disciplines rather than the other way around In this preface we will describe our own efforts and those of many others to promote and develop the study of human fertility using methods models and theories from both biological and demographic domains In December 1997 25 participants from three different countries gathered in Tucson Arizona for a small conference with the title Genetic Influences on Fertility Related Processes That conference represented a fascinating blending of research from two apparently separate domains

Dynamics of Human Reproduction James W. Wood, 2017-09-29 Awarded the W W Howells Award for the Outstanding Book in Biological Anthropology this volume presents a comprehensive integrated and up to date overview of the major physiological and behavioral factors affecting human reproduction In attempting to identify the most important causes of variation in fertility within and among human populations Wood summarizes data from a wide range of societies Trained as an anthropologist as well as a demographer he devotes special attention to so called natural fertility populations in which modern contraceptives and induced abortion are not used to limit reproductive output Such an emphasis enables him to study the interaction of biology and behavior with particular clarity The volume weaves together the physiological demographic and biometric approaches to human fertility in a way that will encourage future interdisciplinary research Instead of offering a general overview the focus is to answer one question Why does fertility and the number of live births

vary from couple to couple within any particular population and from population to population across the human species as a whole Topics covered include ovarian function conception and pregnancy intrauterine mortality reproductive maturation and senescence coital frequency and the waiting time to conception marriage patterns and the initiation of reproduction the fertility reducing effects of breastfeeding the impact of maternal nutrition on reproduction and reproductive seasonality This unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate level textbook and as a reference work

Reproductive Genetics Stéphane Viville, Karen D. Sermon, 2023-01-05 A basic understanding of human genetics is vital for all those working in the field of assisted human reproduction. Genetic makeup can hamper reproduction and insight into this is making genetic diagnosis and counselling increasingly important. This fully updated textbook continues the clear structure of the original edition, beginning with a chapter on the basics of genetics and cytogenetics. Genetic causes of infertility and the effect of epigenetics and transposons on fertility are discussed in detail. Several new chapters are included in this edition, reflecting the advances of the field, including preconception genetic analysis and screening in IVF and mitochondrial genetics. Combining genetics, reproductive biology, and medicine, this is an essential text for practitioners in reproductive medicine and geneticists involved in the field, looking to improve their knowledge of the subject and provide outstanding patient care.
