

## Biology – Chapter 11 Assessment Answers

### 11.1 Assessment Answers:

1a. Factors that are passed from one generation to the next.

1b.

Dominant: Form of an allele whose trait always shows up if it is present

Recessive: Form of an allele whose trait shows up only when the dominant allele is not present.

1c. They have two identical alleles for a gene, so in a genetic cross, each parent contributes only one form of a gene, making inheritance patterns more detectable.

2a. Separation of alleles

2b. The two alleles of the P generation separate during gamete formation. Each gamete carries only a single allele from each parent, which pairs at random in the F<sub>1</sub> generation. The process repeats when F<sub>1</sub> plants cross and produce F<sub>2</sub> plants. As a result, the F<sub>2</sub> generation has new combinations of alleles that may be different from those of preceding generations.

2c. A short plant appeared in the F<sub>2</sub> generation, indicating that this plant had only recessive alleles, so the alleles in the F<sub>1</sub> generation must have separated and then recombined when the plants were crossed.

### 11.2 Assessment Answers:

1a. The likelihood that a particular event will occur.

1b. Punnett squares are used to show all of the combinations of alleles that might result from a cross and the likelihood that each might occur.

2a. During gamete formation, pairs of alleles for a gene segregate, or separate, independently of each other.

2b. 50 percent; the Punnett square should show a cross between a homozygous short plant (tt) and a heterozygous tall plant (Tt).

3a. The patterns of inheritance he observed from the basis of modern genetics.

3b. Fruit flies are small, easy to keep in the laboratory, and produce large numbers of offspring in a short period of time.

### 11.3 Assessment Answers:

1a. In incomplete dominance, neither of two alleles is dominant. The phenotype is a blend of the two alleles, such as pink flowers from red and white parents.

1b. Example: Cross two petunia plants with pink flowers. If some of the offspring have red, some have white, and others have pink flowers, the pink color is caused by incomplete dominance.
