Mass Extinctions

What is the biological significance of mass extinctions?

Why?

Evidence suggests that five mass extinctions have occurred throughout the history of the Earth—the most famous of which led to the extinction of the dinosaurs. Scientists are still studying the causes of these catastrophic events. What can we learn from mass extinctions, and what is their impact on the diversity of life forms found on Earth?

Model 1 – Extinction Over Time

1. What are the names of the three eras identified on the x-axis in Model 1?
The names of the three eras identified in Model 1 are Paleozoic, Mesozoic and Cenozoic.
2. To what does the y-axis on the graph in Model 1 refer? (Include the unit of this variable.)
The y-axis in the graph represents the total number of families that have gone extinct over time.
3. According to Model 1, approximately how long did each of these eras last?
 - a. Paleozoic 291 million years
 - b. Mesozoic 185.5 million years
 - c. Cenozoic 65.5 million years

Biology Mass Extinction Pogil Answers:

Extinction Michael Charles Boulter, 2002 The head of the team analyzing Fossil Record 2 the largest database of information on extinct animals and plants brings us a thoroughly researched introduction to the new developments in the science of life and a chilling account of the effects that humans have had on the planet based on his experience and research

The Mass-Extinction Debates William Glen, 1994 This book examines the arguments and behavior of the scientists who have been locked in conflict over two competing theories to explain why 65 million years ago most life on earth including the dinosaurs perished

Extinctions in the History of Life Paul D. Taylor, 2004-11-11 Extinction is the ultimate fate of all biological species over 99 percent of the species that have ever inhabited the Earth are now extinct The long fossil record of life provides scientists with crucial information about when species became extinct which species were most vulnerable to extinction and what processes may have brought about extinctions in the geological past Key aspects of extinctions in the history of life are here reviewed by six leading palaeontologists providing a source text for geology and biology undergraduates as well as more advanced scholars Topical issues such as the causes of mass extinctions and how animal and plant life has recovered from these cataclysmic events that have shaped biological evolution are dealt with This helps us to view the biodiversity crisis in a broader context and shows how large scale extinctions have had profound and long lasting effects on the Earth's biosphere

The End of Evolution Peter Douglas Ward, 1995 A finalist for a Los Angeles Times book award this contagiously enthusiastic book eloquently recreates the dramatic history of life and its great extinctions and issues an unprecedentedly compelling call to act to preserve our planet's biodiversity Line art photos

The Sixth Extinction Richard E. Leakey, 1996-10-01 Richard Leakey One Of The World's Foremost Experts On Man's Evolutionary Past Now Turns His Eye To The Future And Doesn't Like What He Sees To the philosophical the earth is eternal while the human race presumptive keeper of the world's history is a mere speck in the rich stream of life It is known that nothing upon Earth is forever geography climate and plant and animal life are all subject to radical change On five occasions in the past catastrophic natural events have caused mass extinctions on Earth But today humans stand alone in dubious distinction among Earth's species Homo Sapiens possesses the ability to destroy entire species at will to trigger the sixth extinction in the history of life In *The Sixth Extinction* Richard Leakey and Roger Lewin consider how the grand sprawl of human life is inexorably wreaking havoc around the world The authors of *Origins* and *Origins Reconsidered* unimpeachable authorities on the human fossil record turn their attention to the most uncharted anthropological territory of all the future and man's role in defining it According to Leakey and Lewin man and his surrounding species are end products of history and chance Now however humans have the unique opportunity to recognize their influence on the global ecosystem and consciously steer the outcome in order to avoid triggering an unimaginable upheaval

Mass Extinctions and Their Aftermath, 1997-09-11 Why do mass extinctions occur The demise of the dinosaurs has been discussed exhaustively but has never been out into the

context of other extinction events This is the first systematic review of the mass extinctions of all organisms plant and animal terrestrial and marine that have occurred in the history of life This includes the major crisis 250 million years ago which nearly wiped out all life on Earth By examining current paleontological geological and sedimentological evidence of environmental changes the cases for explanations based on climate change marine regressions asteroid or comet impact anoxia and volcanic eruptions are all critically evaluated *Mass Extinctions* Stephen K. Donovan, S. K. Donovan, 1989

Extinction Events in Earth History IGCP Project 216--"Global Biological Events in Earth History.", 1990 This volume is dedicated to the interdisciplinary study of dynamic biological changes through the Phanerozoic which are associated with mass extinction events and similar biotic crises and their causal mechanisms In particular it documents in detail the complex nature of terrestrial and extraterrestrial feedback loops that are associated with many mass extinction intervals Authors have been asked to represent most of the known mass extinction events through time and to comment on the complex earthbound or extraterrestrial causes or both for global biotic crises The reader is offered new perspectives of extinction boundaries a more innovative and diverse approach to causal mechanisms and mass extinction theory blended views of paleobiologists oceanographers geochemists volcanologists and sedimentologists by an international cast of authors No other book on extinction presents such a broad spectrum of data and theories on the subject of mass extinction

The End of Evolution Peter Ward, 1995 A controversial account of the complex issues surrounding the three mass extinctions found in the geological record The author concludes that the most recent extinction which began at the end of the last Ice Age is directly caused by humans *Dying Planet* Jon Erickson, 1991 What we need to know on a personal and societal level to reverse current trends for our planet

Rivers in Time Peter Douglas Ward, 2000 Elaborating on and updating Ward's previous work *The End of Evolution* *Rivers in Time* delves into his newest discoveries The book presents the gripping tale of the author's investigations into the history of life and death on Earth through a series of expeditions that have brought him ever closer to the truth about mass extinctions past and future *Lost Creatures of the Earth* Jon Erickson, 2014-05-14 Presents an examination of possible phenomena that caused dramatic changes in the earth's surface that could explain periodic mass extinctions and the evolution of new species

The Worst of Times P. B. Wignall, 2017-05-09 260 million years ago life on Earth suffered wave after wave of cataclysmic extinctions with the worst the end Permian extinction wiping out nearly every species on the planet This book delves into the mystery behind these extinctions and sheds light on the fateful role the primeval supercontinent known as Pangea may have played in causing these global catastrophes Drawing on the latest discoveries as well as his own field expeditions to remote corners of the world Paul Wignall reveals what scientists are only now beginning to understand about the most prolonged period of environmental crisis in Earth's history He describes how a series of unprecedented extinction events swept across the planet in a span of eighty million years rapidly killing marine and terrestrial life on a scale more devastating than the dinosaur extinctions that would come later Wignall shows how these

extinctions some of which have only recently been discovered all coincided with gigantic volcanic eruptions of flood basalt lavas that occurred when the world's landmasses were united into a single vast expanse Unraveling one of the great enigmas of ancient Earth this book also explains how the splitting apart of Pangea into the continents we know today ushered in a new age of vibrant and more resilient life on our planet Adapted from book jacket **The Sixth Extinction** Elizabeth

Kolbert,2014-01-01 Over the last half billion years there have been five major mass extinctions when the diversity of life on Earth suddenly and dramatically contracted Scientists are currently monitoring the sixth extinction predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs This time around the cataclysm is us In this book the author tells us why and how human beings have altered life on the planet in a way no species has before She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin and through the present day The sixth extinction is likely to be mankind's most lasting legacy compelling us to rethink the fundamental question of what it means to be human Back cover **Mass Extinctions and Their Aftermath**,2000 **Mass-Extinction Debates**

William Glen,1994-11-01 The history of life on Earth is punctuated by half a dozen puzzling mass extinctions that constitute the benchmarks of the geologic time scale These great breaks in the continuity of the fossil record have invited a wide array of scientific speculation The most thoroughly studied of the mass extinctions occurred 65 million years ago when most life on Earth incl the dinosaurs perished Two rival hypotheses have emerged to account for this catastrophic event the impactor hypothesis sees the earth bombarded with deadly meteorites while the competing volcanist hypothesis evokes gigantic volcanic eruptions This book examines the arguments and behavior of the scientists who have been locked in conflict over the competing hypotheses *Under a Green Sky* Peter D. Ward,2009-10-13 According to University of Washington

paleontologist Peter D Ward all but one of the major extinction events in the history of the world have been brought on by climate change the same global warming that occurs today In *Under a Green Sky* he examines the causes of the Permian extinction an event more than 200 million years ago so cataclysmic that it destroyed more than 90% of all species and nearly 97% of all living things This near total devastation was caused by a warming of the earth due to rising levels of carbon dioxide Ward explains how that extinction as well as four others happened and then applies those chilling lessons to the present day showing how the ancient past may hold the key to earth's future **The Last Extinction** Les Kaufman,Kenneth

Mallory,1988-01 Who do we want to share the world with The most widespread mass species extinction since the one that carried off the dinosaurs is currently going on around us What distinguishes the present extinction from those left in the fossil record is that we are both its cause and its potential victims The six essays in *The Last Extinction* are united by the authors passionate commitment to preserving the natural diversity of the earth's myriad plant and animal species As this book demonstrates when we kill these other species we kill a bit of ourselves Dorian Sagan New York Times Book ReviewThe

essays and their authors are Why the Ark is Sinking Les Kaufman Mass Extinctions New Answers New Questions David Jablonski The Amazon Paradise Lost Ghillian T Prance Vanishing Species in Our Own Backyard James D Williams and Ronald M Nowak Riders of the Last Ark Thomas J Foose Life in the Next Millennium Who Will Be Left in Earth's Community David Ehrenfeld Les Kaufman is a Research Scientist and Curator of Education at the New England Aquarium Kenneth Mallory is editor of the Aquarium's journal Aquasphere [Mass Extinctions - Processes & Evidence](#) Stephen K. Donovan, 1991-09-29 Mass extinctions the apparently sudden and regular disappearance of large numbers of species from the fossil record are one of the mostly keenly contested and controversial debates in contemporary science A great deal of research effort has gone into the topic and certain claims notably that mass extinction eras display a periodicity of 24 million years have caused great interest and disagreement *Under a Green Sky* Peter Douglas Ward, 2007 More than 200 million years ago a cataclysm known as the Permian extinction destroyed nearly 97 percent of all living things Its origins have long been a puzzle Paleontologist Ward fresh from helping prove that an asteroid had killed the dinosaurs turned to the Permian problem and he has come to a stunning conclusion that the near total devastation at the end of the Permian period was caused by rising levels of carbon dioxide leading to climate change The story of the discovery makes for a globe spanning adventure Here Ward explains how the Permian extinction as well as four others happened and describes the freakish oceans belching poisonous gas and sky slightly green and always hazy that would have attended them Those ancient upheavals demonstrate that the threat of climate change cannot be ignored lest the world's life today ourselves included face the same dire fate From publisher description
