Social Media and Crowdsourcing Sujoy Chatterjee,Thipendra P Singh,Sunghoon Lim,Anirban

Mukhopadhyay,2023-12-06 Social media and crowdsourcing are important tools for solving complex problems The benefit of crowdsourcing is that it leverages the power of human intelligence cost effectively and with less time Social Media and Crowdsourcing Application and Analytics examines the concepts of social media and crowdsourcing as well as their analytical aspects It explores how these technologies contribute to the real world and examines such applications as promoting social good agriculture healthcare tourism disaster management education crime control and cultural heritage The book also looks at ethical issues in crowdsourcing and future scenarios and challenges for policy Highlights of the book include the following A crowdsourcing application in agriculture Crowdsourcing outline for a contemporary aided medicinal backup system Crowdsourcing based recommendation in the tourism industry Crowdsourcing mechanisms for reviving cultural heritage Expanding the overarching concept of utilizing social media and crowdsourcing to solve various real life problems this book discusses how to bring together the wisdom of crowds for various decision making problems in agriculture disaster management and healthcare It addresses the various ethical issues arising out of various crowdsourcing based applications It puts forward diverse methodologies to involve crowdsourcing in education to implement new strategies to enhance learning outcomes This book also addresses various problem solving techniques for recommender applications in the travel and tourism industry Providing a systematic discussion of the many sectors using crowdsourcing as an essential part of social innovation this book is a theoretical and methodological look at the application of social media Distributed Applications and Interoperable Systems

José Pereira,Laura Ricci,2019-06-05 This book constitutes the proceedings of the 19th IFIP International Conference on Distributed Applications and Interoperable Systems DAIS 2019 held in Kongens Lyngby Denmark in June 2019 as part of the 14th International Federated Conference on Distributed Computing Techniques DisCoTec 2019 The 9 full papers presented together with 2 short papers were carefully reviewed and selected from 28 submissions The papers addressed challenges in multiple application areas such as the Internet of Things cloud and edge computing and mobile systems Some papers focused on middleware for managing concurrency and consistency in distributed systems including data replication and transactions **Social Sensing and Big Data Computing for Disaster**

Management Zhenlong Li,Qunying Huang,Christopher T. Emrich,2020-12-17 Social Sensing and Big Data Computing for Disaster Management captures recent advancements in leveraging social sensing and big data computing for supporting disaster management Specifically analysed within this book are some of the promises and pitfalls of social sensing data for disaster relevant information extraction impact area assessment population mapping occurrence patterns geographical disparities in social media use and inclusion in larger decision support systems Traditional data collection methods such as remote sensing and field surveying often fail to offer timely information during or immediately following disaster events

Social sensing enables all citizens to become part of a large sensor network which is low cost more comprehensive and always broadcasting situational awareness information However data collected with social sensing is often massive heterogeneous noisy and unreliable in some aspects It comes in continuous streams and often lacks geospatial reference information Together these issues represent a grand challenge toward fully leveraging social sensing for emergency management decision making under extreme duress Meanwhile big data computing methods and technologies such as high performance computing deep learning and multi source data fusion become critical components of using social sensing to understand the impact of and response to the disaster events in a timely fashion This book was originally published as a special issue of the International Journal of Digital Earth

Big Data in ehealthcare Nandini Mukherjee, Sarmistha Neogy, Samiran Chattopadhyay, 2019-01-15 This book focuses on the different aspects of handling big data in healthcare It showcases the current state of the art technology used for storing health records and health data models It also focuses on the research challenges in big data acquisition storage management and analysis

Digital Transformation with AI and Smart Servicing Technologies for Sustainable Rural Development Shengfeng Qin, Hongan Wang, Cuixia Ma, 2024-06-27 This book introduces and demonstrates the state of the art research and development in tackling sustainable urban and rural integration supported by digitalization and digital transformation in rural areas with Industry 4.0 technologies Digital Transformation with AI and Smart Servicing Technologies for Sustainable Rural Development is centered around how to deal with the sustainable urban and rural integration with advanced digital technologies such as artificial intelligence AI Big Data Crowdsourcing Crowdsensing and digital twin applications Digital Transformation with AI and Smart Servicing Technologies for Sustainable Rural Development comes from the authors international collaborative projects funded by British Council and National Sciences Foundation of China and our Newton Prize Winning project founded by UK Department for Business Energy Industrial Strategy It covers digital platform design with integrated crowdsourcing crowdsensing and digital twin technologies for smart community services and governing The authors discuss smart textile design for health and social care and VR AR based tele healthcare services for plants livestock and people It also presents smart building technologies and integrated services for remote rural areas This book will be a valuable reference for multidisciplinary researchers policy makers urban and rural development engineers and university students to support their research and work in AI and smart technology applications

Advanced Methodologies and Technologies in Network Architecture, Mobile Computing, and Data Analytics Khosrow-Pour, D.B.A., Mehdi, 2018-10-19 From cloud computing to data analytics society stores vast supplies of information through wireless networks and mobile computing As organizations are becoming increasingly more wireless ensuring the security and seamless function of electronic gadgets while creating a strong network is imperative Advanced Methodologies and Technologies in Network Architecture Mobile Computing and Data Analytics highlights the challenges associated with creating a strong network architecture in a perpetually online society Readers will learn various

methods in building a seamless mobile computing option and the most effective means of analyzing big data This book is an important resource for information technology professionals software developers data analysts graduate level students researchers computer engineers and IT specialists seeking modern information on emerging methods in data mining information technology and wireless networks **Handbook of Mobile Data Privacy** Aris Gkoulalas-Divanis, Claudio Bettini, 2018-10-26 This handbook covers the fundamental principles and theory and the state of the art research systems and applications in the area of mobility data privacy It is primarily addressed to computer science and statistics researchers and educators who are interested in topics related to mobility privacy This handbook will also be valuable to industry developers as it explains the state of the art algorithms for offering privacy By discussing a wide range of privacy techniques providing in depth coverage of the most important ones and highlighting promising avenues for future research this handbook also aims at attracting computer science and statistics students to this interesting field of research The advances in mobile devices and positioning technologies together with the progress in spatiotemporal database research have made possible the tracking of mobile devices and their human companions at very high accuracy while supporting the efficient storage of mobility data in data warehouses which this handbook illustrates This has provided the means to collect store and process mobility data of an unprecedented quantity quality and timeliness As ubiquitous computing pervades our society user mobility data represents a very useful but also extremely sensitive source of information On one hand the movement traces that are left behind by the mobile devices of the users can be very useful in a wide spectrum of applications such as urban planning traffic engineering and environmental pollution management On the other hand the disclosure of mobility data to third parties may severely jeopardize the privacy of the users whose movement is recorded leading to abuse scenarios such as user tailing and profiling A significant amount of research work has been conducted in the last 15 years in the area of mobility data privacy and important research directions such as privacy preserving mobility data management privacy in location sensing technologies and location based services privacy in vehicular communication networks privacy in location based social networks privacy in participatory sensing systems which this handbook addresses This handbook also identifies important privacy gaps in the use of mobility data and has resulted to the adoption of international laws for location privacy protection e g in EU US Canada Australia New Zealand Japan Singapore as well as to a large number of interesting technologies for privacy protecting mobility data some of which have been made available through open source systems and featured in real world applications **Intelligent Road Transport Systems** Yunpeng WANG, Xinpeng YAN, Guangquan LU, Chaozhong WU, 2022-05-17 In recent years the application of intelligent transportation systems ITS has steadily expanded and has become a hot spot of common interest to universities scientific research institutes enterprises and institutions in the transportation field ITS is the product of the deep integration of modern high tech in the transportation industry and its development has accompanied that of modern high tech ITS is now also becoming part of the Internet of Things IoT and is

expected to contribute significantly to making our cities smarter and connecting with other infrastructure Although there are many monographs and textbooks on intelligent transportation with the advancement of technology and changes in demand the key technologies of ITS are also rapidly changing This book chiefly focuses on the main technologies of ITS examining them from four perspectives sense perception and management of traffic information chapters 2 3 transmission interaction of traffic information chapter 4 prediction prediction of traffic states chapter 6 and application intelligent transportation applications chapters 6 through 10 Given its scope the book can be used as a textbook for undergraduates or graduates as well as a reference book for research institutes and enterprises This book emphasizes the use of basic traffic engineering principles and state of art methodologies to develop functional designs It largely reflects the authors own experience in adapting these methodologies to ITS design For example the book addresses various forms of data collection models used to predict and evaluate traffic states comprehensive description in connected vehicles applications for users and traffic managers etc The knowledge gained here will allow designers to estimate the performance differences among alternatives and gauge their potential benefits for functional design purposes To gain the most from the book readers should be somewhat familiar with the field of traffic engineering and interested in ITS

Technology: Toward Business Sustainability Bahaaeddin Alareeni, Allam Hamdan, 2024-03-20 This book proceedings addresses a crucial gap in understanding the impact of technology on Business Model Innovation BMI It emphasizes the need for further research to explore the intricate relationship between technology and BMI focusing on opportunities and challenges By delving into how technology influences emerging business model innovations and enhances operational efficiency the publication aims to advance knowledge Inviting diverse research methods it sheds light on various ideas within the technology and BMI realm Tailored for students scholars professionals and policymakers this book contributes to the evolving field of BMI and technology

Data, Algorithms and Policies Mario Cimoli, 2018 **Key success factors through internal organisation and external cooperation. An analyses of the most innovative platforms from China and the USA** Eileen-Natalie Gerlach, 2022-01-31 Master s Thesis from the year 2021 in the subject Economics Innovation economics grade 1 1 University of applied sciences Munich language English abstract This thesis analyses the most innovative platforms from China and the United States of America in order to provide the key success factors through internal organisation and external cooperation The findings are concluded in a role model for digital innovation and an innovation scorecard that helps to compare the innovation level of a company in electronic markets with its competition In digital markets the level of innovation as well as state of the art technologies are massively influencing the success of companies Here innovation takes place on two different levels first it describes the transformation of incumbent companies towards a digital platform and second it depicts the innovative pressure within the highly competitive environment of native digital platforms such as Google or Alibaba that must constantly and fast evolve in order to maintain their leadership position In the native platform segment innovation is mostly

achieved with business cooperation in order to gain technological knowledge whereas innovation relating to incumbents mostly deals with an internal reorganisation of existing structures that is often very individual and varies from company to company

A GROUNDBREAKING GUIDE TO THE ART SCIENCE TOOLS AND DEPLOYMENT OF INNOVATION It has never been more important to educate people and organizations how to out imagine out create and out innovate The insight and experiences captured by this book make an important contribution toward reaching this goal From the Foreword by Deborah Wince Smith President Council on Competitiveness Developed by the editors of the International Journal of Innovation Science and featuring contributions from more than 40 innovation experts and thought leaders Global Innovation Science Handbook presents a proven approach for understanding and implementing innovation in any industry This pioneering work is based on a defined body of knowledge that includes intent methodology tools and measurements It challenges the popular paradigm that learned innovation is impossible and lays out a systematic process for developing innovation skills Each chapter can be independently read and utilized in the daily practice of innovation Real world case studies from financial government and education sectors illustrate the concepts discussed in this definitive resource Global Innovation Science Handbook covers Preparing for innovation establishing a framework and creating a culture for innovation Key innovation concepts such as creativity neuroscience biomimetics benchmarking and ethnography Creativity tools including Kano analysis storyboarding absence thinking Lotus Blossom SCAMPER and others Techniques essential to innovation science such as Six Thinking Hats mind mapping social networks market research and lead user analysis Innovation radar indices and other measurements Idea management the process of creating screening

exploring and evaluating ideas to bring those most valuable from concept to reality Innovation methodologies including TRIZ Brinnovation crowdsourcing Eureka stage gate and others Deployment a life cycle approach involving inspiration strategy organization excellence culture measurement protection of intellectual property and launch Case studies featuring cutting edge technological innovations in finance government and education *Crowdsourcing the Construction of Structured Web Databases*, 2013 Structured Web databases are now ubiquitous Traditionally there are two major approaches to build such databases manual and automatic In the former one the developers execute all tasks manually to create the database and maintain it over time This approach could result in highly accurate database but it does not scale with the size of the database In the latter one the developers often apply information extraction and integration techniques henceforth IE II techniques for short to unstructured text as well as structured data to automatically populate and maintain the database Since this approach relies largely on machine it can scale well However as IE II techniques are imperfect the resulting database often contains inaccuracies In recent years crowdsourcing has emerged as a promising alternative to both manual and automatic approaches for building structured Web databases In this approach the developers recruit a large number of human users to construct the database e g by exposing the database on Wiki pages and let Web users add or modify information Crowdsourcing combines the benefits of both manual and automatic approaches First since the tasks are distributed to a large number of users the system can scale up to a reasonable size of the database Second since information are manually entered and reviewed by human users they will be more accurate than being automatically extracted by machine Due to these advantages crowdsourcing is getting increasingly popular and is even used in conjunction with manual and automatic approaches The goal of this dissertation is to study issues that arise in crowdsourcing the construction of structured Web databases Toward this goal I make three contributions First I conduct a survey on crowdsourcing applications and platforms and build a taxonomy over existing crowdsourcing work Due to the benefits of crowdsourcing there have been an increasing number of crowdsourcing applications and platforms being developed These applications and platforms are getting more complex and also overlap in both design and functionalities Thus it is a challenging task to understand and identify boundaries to classify these systems and platforms The goal of this survey is to provide a global picture of existing crowdsourcing work I do not attempt to be exhaustive Rather I only sketch the most important aspects of this picture using real world examples In the second contribution I address a concrete challenge in the crowdsourcing space how to efficiently incorporate user feedback into the IE II process which is used to construct the structured database Many applications today employ IE II programs to infer structures from unstructured data Automatic IE II are inherently imprecise Hence such programs often make many IE II mistakes and thus can significantly benefit from user feedback Today however there is no good way to automatically provide and process such feedback When finding an IE II mistake users often must alert the developer team e g via email or Web form about the mistake and then wait for the team to manually examine the

program internals to locate and fix the mistake a slow error prone and frustrating process To address this problem I propose a solution for users to directly provide feedback and for IE II programs to automatically process such feedback In the last contribution I consider the problem of encoding structured data in wikis as views over an underlying database Wikis provide a good way to collaboratively build knowledge bases Within a wiki the wiki pages often display not just text but also structured data such as tables lists and infoboxes Today such structured data is often stored in isolation within the page perhaps as a text blob This raises three serious problems it is labor intensive to update such structured data we may have inconsistent data as the same facts may be repeatedly stored in multiple pages and it is difficult to query structured data embedded in text In this work I consider how to address these problems The key idea is to encode structured data in wiki pages as views over an underlying structured database This way if a user updates a view the update will be automatically pushed into the underlying database then propagated to other affected views Thus this can significantly mitigate the above problems
