Zhou, Caigen Xhou, Qiang Li, 2014-05-05 Presents the theories and applications of determining the position of an object in space through the use of satellites As the importance of space reconnaissance technology intensifies more and more countries are investing money in building their own space reconnaissance satellites Due to the secrecy and sensitivity of the operations it is hard to find published papers and journals on the topic outside of military and governmental agencies This book aims to fill the gap by presenting the various applications and basic principles of a very modern technology The space electronic reconnaissance system in mono multi satellite platforms is a critical feature which can be used for detection localization tracking or identification of the various kinds of signal sources from radar communication or navigation systems Localization technology in space electronic reconnaissance uses single or multiple satellite receivers which receive signals from radar communication and navigation emitters in the ground ocean and space to specify the location of emitter The methods principles and technologies of different space electronic reconnaissance localization systems are introduced in this book as are their performances and the various methods are explained and analysed Digital simulations illustrate the results Presents the theories and applications of determining the position of an object in space through the use of satellites Introduces methods principles and technologies of localization and tracking in the space electronic reconnaissance system the localization algorithm and error in satellite system and near space platform system and the tracking algorithm and error in single satellite to satellite tracking system Provides the fundamentals the mathematics the limitations the measurements and systems of localization with emphasis on defence industry applications Highly relevant for Engineers working in avionics radar communication navigation and electronic warfare Chapters include the introduction of space electronic reconnaissance localization technology knowledge about the satellite orbit and basic terminology of passive localization single satellite geolocation technology based on direction finding three satellite geolocation technology based on time difference of arrival TDOA two satellite geolocation technology based on TDOA and frequency difference of arrival FDOA the single satellite localization technology based on kinematics theory localization principles of near space platform electronic reconnaissance systems the orbit determination of single satellite to satellite tracking using bearings only BO information the orbit determination of single satellite to satellite tracking using bearings and frequency information the orbit determination of single satellite to satellite tracking using frequency only FO information Each chapter ends with a problem and solution section some using Matlab code

Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain big data is defined as any high volume high diversity biological clinical environmental and lifestyle information collected from single individuals to large cohorts in relation to their health and wellness status at one or several time points Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life opening doors to alternate therapies drugs and diagnostic tools Signal Processing and Machine Learning for Biomedical Big Data thus discusses modalities the numerous ways in which this

data is captured via sensors and various sample rates and dimensionalities Capturing analyzing storing and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools This book covers several of these aspects in two ways firstly through theoretical signal processing chapters where tools aimed at big data be it biomedical or otherwise are described and secondly through application driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data This text aimed at the curious researcher working in the field as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis It is the hope of Drs Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field thereby improving patient quality of life Provides an overview of recent state of the art signal processing and machine learning algorithms for biomedical big data including applications in the neuroimaging cardiac retinal genomic sleep patient outcome prediction critical care and rehabilitation domains Provides contributed chapters from world leaders in the fields of big data and signal processing covering topics such as data quality data compression statistical and graph signal processing techniques and deep learning and their applications within the biomedical sphere This book s material covers how expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications
