this advisory report The Quality Management System is a change mechanism which is targeted at developing a customer driven organization through integrative working practices The underlying purpose of Total Quality Management has much common ground with the EMS Health and Safety Management can be regarded as a set of external controls dictated to business and which establishes and fulfills specific targets In the project of wastewater minimization the Health and Safety Department helps the team by carrying out the necessary risk assessment of operations and develops related control activities The Health and Safety Manager also has a role as member of the project team so the integration between the systems will be fully established Effective health safety and environmental management is not common sense but is based on a common understanding of risks and how to control them brought about through good management

Successful Environmental Management Joe Sheerin,1997

Implementing an Integrated Health, Safety and Environmental Management System Filippos Tepaskoualos,Panos Chountalas,2017 Over the past two decades there has been an increasing trend of organizations implementing simultaneously two or more management systems The structural similarities of these systems despite the diversity of their fields of application such as occupational health and safety for OHSAS 18001 and environmental management for ISO 14001 have enabled many organizations to integrate different systems into a single one rather than implementing them separately from one another The purpose of this paper is to examine in depth a case of integration of the ISO 14001 and OHSAS 18001 systems using a construction company as a research setting in order to draw conclusions about the level of integration achieved as well as the benefits the problems and the critical success factors of this endeavour The findings of this study show that both the company s devotion to the fulfillment of the critical success factors and the identical structure of the two systems under consideration have facilitated the successful outcome of integration However this does not automatically imply that the company adopted the idea of full integration Instead the maximization of integration benefits and the elimination of related problems was achieved through the company s conscious choice to proceed with partial integration keeping separate manuals policies and risk management procedures for each system This study will be useful in order to understand that partial integration is a perfectly acceptable and realistic solution that under certain circumstances may even have a better cost benefit ratio than full integration
