In December, General Motors produced 6,600 customized vans at its plant in Detroit. The labor productivity at this plant is known to have been 0.10 vans per labor-hour during that month. 300 laborers were employed at the plant that month.

a) How many hours did the average laborer work that month?

Output	6,600
Productivity per labor-hour	0.10
Laborers	300

1. How many hours did the average laborer work that month?

1. The number of hours worked by the average laborer can be calculated by dividing the total output by the labor productivity per labor-hour. The total output is 6,600 vans, and the labor productivity is 0.10 vans per labor-hour. Therefore, the average laborer worked 66,000 hours (6,600 / 0.10).
