New Trends in Microlocal Analysis J.-M. Bony, M. Morimoto, 2012-12-06 Microlocal analysis began around 1970 when Mikio Sato along with coauthors Masaki Kashiwara and Takahiro Kawai wrote a decisive article on the structure of pseudodifferential equations thus laying the foundation of D modules and the singular spectrums of hyperfunctions The key idea is the analysis of problems on the phase space i.e the cotangent bundle of the base space Microlocal analysis is an active area of mathematical research that has been applied to many fields such as real and complex analysis representation theory topology number theory and mathematical physics This volume contains the presentations given at a seminar jointly organized by the Japan Society for the Promotion of Science and Centre National des Recherches Scientifiques entitled New Trends in Microlocal Analysis The book is divided into three parts partial differential equations and mathematical analysis mathematical physics and algebraic analysis D modules and sheave theory The large variety of new research that is covered will prove invaluable to students and researchers alike

New Trends in Geometric Analysis Antonio Alarcón, Vicente Palmer, César Rosales, 2023-10-18 The aim of this book is to provide an overview of some of the progress made by the Spanish Network of Geometric Analysis REAG by its Spanish acronym since its born in 2007 REAG was created with the objective of enabling the interchange of ideas and the knowledge transfer between several Spanish groups having Geometric Analysis as a common research line This includes nine groups at Universidad Aut noma de Barcelona Universidad Aut noma de Madrid Universidad de Granada Universidad Jaume I de Castell n Universidad de Murcia Universidad de Santiago de Compostela and Universidad de Valencia The success of REAG has been substantiated with regular meetings and the publication of research papers obtained in collaboration between the members of different nodes On the occasion of the 15th anniversary of REAG this book aims to collect some old and new contributions of this network to Geometric Analysis The book consists of thirteen independent chapters all of them authored by current members of REAG The topics under study cover geometric flows constant mean curvature surfaces in Riemannian and sub Riemannian spaces integral geometry potential theory and Riemannian geometry among others Some of these chapters have been written in collaboration between members of different nodes of the network and show the fruitfulness of the common research atmosphere provided by REAG The rest of the chapters survey a research line or present recent progresses within a group of those forming REAG Surveying several research lines and offering new directions in the field the volume is addressed to researchers including postdocs and PhD students in Geometric Analysis in the large
