

Lab 11: The Mean-Value Theorem

Problem Statement

- Suppose f is a function defined on the interval $[a, b]$ and f is differentiable on (a, b) . Let M be the maximum value of f on $[a, b]$ and m be the minimum value of f on $[a, b]$. Let c be a point in (a, b) such that $f(c) = \frac{M+m}{2}$. Let L be the tangent line to the graph of f at $(c, f(c))$. Let A be the area of the region bounded by the graph of f and the line L above the x -axis. Let B be the area of the region bounded by the graph of f and the line L below the x -axis. Let C be the area of the region bounded by the graph of f and the x -axis above the x -axis. Let D be the area of the region bounded by the graph of f and the x -axis below the x -axis.

Prove that

For this situation, you will be given a graph of a function f on the interval $[a, b]$. The function f is differentiable on (a, b) and has a local maximum at c . The graph of f is shown in the figure. The area of the region bounded by the graph of f and the x -axis above the x -axis is A . The area of the region bounded by the graph of f and the x -axis below the x -axis is B . The area of the region bounded by the graph of f and the x -axis above the x -axis is C . The area of the region bounded by the graph of f and the x -axis below the x -axis is D .

Introduction

The Mean-Value Theorem (MVT) states that if a function f is continuous on the closed interval $[a, b]$ and differentiable on the open interval (a, b) , then there exists a point c in (a, b) such that $f'(c) = \frac{f(b) - f(a)}{b - a}$. In this lab, we will use the MVT to prove that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$.

$$A + B = C + D$$

First, we will show that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$. To do this, we will use the MVT to show that the slope of the tangent line L is equal to the slope of the secant line connecting $(a, f(a))$ and $(b, f(b))$.

Second, we will show that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$. To do this, we will use the MVT to show that the slope of the tangent line L is equal to the slope of the secant line connecting $(a, f(a))$ and $(b, f(b))$. We will also use the fact that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$.

$$A + B = C + D \implies A + B - C = D$$

So this equation, the MVT, and the fact that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$ imply that $A + B = C + D$.

The next step is to show that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$. To do this, we will use the MVT to show that the slope of the tangent line L is equal to the slope of the secant line connecting $(a, f(a))$ and $(b, f(b))$.

$$A + B = C + D \implies A + B - C = D$$

So this equation, the MVT, and the fact that the area of the region bounded by the graph of f and the x -axis is equal to the area of the region bounded by the graph of f and the tangent line L at $(c, f(c))$ imply that $A + B = C + D$.
