Decision Science for Housing and Community Development Michael P. Johnson, Jeffrey M. Keisler, Senay Solak, David A. Turcotte, Armagan Bayram, Rachel Bogardus Drew, 2015-10-01. A multidisciplinary approach to problem solving in community-based organizations using decision models and operations research applications. A comprehensive treatment of public sector operations research and management science. **Decision Science for Housing and Community Development: Localized and Evidence-Based Responses to Distressed Housing and Blighted Communities** addresses critical problems in urban housing and community development through a diverse set of decision models and applications. The book represents a bridge between theory and practice and is a source of collaboration between decision and data scientists and planners, advocates, and community practitioners. The book is motivated by the needs of community-based organizations to respond to neighborhood economic and social distress represented by foreclosed, abandoned, and blighted housing through community organizing, service provision, and local development. The book emphasizes analytic approaches that increase the ability of local practitioners to act quickly, thoughtfully, and effectively. By doing so, practitioners can design and implement responses that reflect stakeholder values associated with healthy and sustainable communities that benefit from increased organizational capacity for evidence-based responses and that result in solutions that represent improvements over the status quo according to multiple social outcome measures. Featuring quantitative and qualitative analytic methods as well as prescriptive and exploratory decision modeling, the book also includes discussions of the principles of decision theory and

descriptive analysis to describe ways to identify and quantify values and objectives for community development Mathematical programming applications for real world problem solving in foreclosed housing acquisition and redevelopment Applications of case studies and community engaged research principles to analytics and decision modeling Decision Science for Housing and Community Development Localized and Evidence Based Responses to Distressed Housing and Blighted Communities is an ideal textbook for upper undergraduate and graduate level courses in decision models and applications humanitarian logistics nonprofit operations management urban operations research public economics performance management urban studies public policy urban and regional planning and systems design and optimization The book is also an excellent reference for academics researchers and practitioners in operations research management science operations management systems engineering policy analysis city planning and data analytics

Operations Research Problems Raúl Poler, Josefa Mula, Manuel Díaz-Madroñero, 2013-11-08 The objective of this book is to provide a valuable compendium of problems as a reference for undergraduate and graduate students faculty researchers and practitioners of operations research and management science These problems can serve as a basis for the development or study of assignments and exams Also they can be useful as a guide for the first stage of the model formulation i e the definition of a problem The book is divided into 11 chapters that address the following topics Linear programming integer programming non linear programming network modeling inventory theory queue theory tree decision game theory dynamic programming and markov processes Readers are going to find a considerable number of statements of operations research applications for management decision making The solutions of these problems are provided in a concise way although all topics start with a more developed resolution The proposed problems are based on the research experience of the authors in real world companies so much as on the teaching experience of the authors in order to develop exam problems for industrial engineering and business administration studies

Linear Integer Programming Elias Munapo, Santosh Kumar, 2021-12-06 This book presents the state of the art methods in Linear Integer Programming including some new algorithms and heuristic methods developed by the authors in recent years Topics as Characteristic equation CE application of CE to bi objective and multi objective problems Binary integer problems Mixed integer models Knapsack models Complexity reduction Feasible space reduction Random search Connected graph are also treated
