*Biophysics*, 1992      **Osmosis Engineering** Nidal Hilal, Ahmad Fauzi Ismail, Mohamed Khayet Souhaimi, Daniel Johnson, 2021-04-23 Osmosis Engineering provides a comprehensive overview of the state of the art surrounding osmosis based research and industrial applications The book covers the underpinning theories technology developments and commercial applications Sections discuss innovative and advanced membranes and modules for osmosis separation processes e g reverse osmosis forward osmosis pressure retarded osmosis osmotic membrane distillation different application of these osmosis separation processes for energy and water separation such as the treatment of radioactive waste oily wastewater and heavy metal removal draw solutions pretreatment technologies fouling effects the use of renewable energy driven osmotic processes computational environmental and economic studies and more Covers state of the art osmotic engineering technologies and applications Presents multidisciplinary topics in engineered osmosis including both fundamental and applied EO concepts Includes major challenges such as fouling mitigation membrane development pre treatment and energy usage      Self-Assembled Water Chains Byung Il Kim, 2022-12-14 Despite advances in the long range electrostatic double layer force which depends strongly on ionic strength in water by using theoretical models such as DLVO Derjaguin Landau Verwey and Overbeek the structure of confined water in air still remains widely unknown and has led to a variety of unexplained phenomena This book bridges that gap by introducing a newly developed scanning probe microscopy SPM approach which enables one to probe confined water at the molecular and atomic scale Written by the developer of SPM this book covers this new approach as well as original approaches to addressing general interfacial water issues It also introduces the cantilever based optical interfacial force microscope COIFM which was invented by the author along with the methodology The improved understanding will contribute to liquid based nano and bio technologies such as lab on a chip technologies nanofluidic devices dip pen nanolithography nano oxidation water based granular interactions liquid based nanolubricants hydration layers in biopolymers manipulation of biomolecules protein folding stability of colloid suspensions enzyme activity swelling in clays development of bioactive surfaces water columns and ion channeling in membranes and scanning probe microscopy SPM It will also contribute to the improved performance of moving components in silicon based micro electro mechanical system MEMS devices where water plays a key role in interfacial interactions      **Controlled Nanoscale Motion** Heiner Linke, Alf Mansson, 2007-02-09 When the size of a machine approaches the nanometer scale thermal fluctuations become large compared to the energies that drive the motor The control of motion at the nanoscale therefore requires physical understanding and technical approaches that are fundamentally different from those that are successful at the macroscale This volume provides an introduction to the state of the art of controlled nanoscale motion in biological and artificial systems Topics include the control and function of protein motors the physics of non equilibrium Brownian motion and the physics and fabrication of synthetic molecular motors The chapters in this book are based on

selected contributions on the 2005 Nobel Symposium to Controlled Nanoscale Motion and are written by leading experts in their fields

**DNA Nanoscience** Kenneth Douglas, 2016-10-14 DNA Nanoscience From Prebiotic Origins to Emerging Nanotechnology melds two tales of DNA One is a look at the first 35 years of DNA nanotechnology to better appreciate what lies ahead in this emerging field The other story looks back 4 billion years to the possible origins of DNA which are shrouded in mystery The book is divided into three parts comprised of 15 chapters and two Brief Interludes Part I includes subjects underpinning the book such as a primer on DNA the broader discipline of nanoscience and experimental tools used by the principals in the narrative Part II examines the field of structural DNA nanotechnology founded by biochemist crystallographer Nadrian Seeman that uses DNA as a construction material for nanoscale structures and devices rather than as a genetic material Part III looks at the work of physicists Noel Clark and Tommaso Bellini who found that short DNA nanoDNA forms liquid crystals that act as a structural gatekeeper orchestrating a series of self assembly processes using nanoDNA This led to an explanation of the polymeric structure of DNA and of how life may have emerged from the prebiotic clutter
